TYLER TECHNOLOGIES RECOGNIZED AS ONE OF NORTH AMERICA'S FASTEST GROWING TECHNOLOGY COMPANIES BY DELOITTE TECHNOLOGY FAST 500

Dallas, November 17, 2003 — Tyler Technologies announced today that it has been recognized as one of the 500 fastest growing technology companies in North America through its inclusion in the prestigious 2003 Deloitte Technology Fast 500. Rankings in the Fast 500 are based on average percentage revenue growth over five years, from 1998-2002. Tyler Technologies' revenues grew 471% during this period, ranking Tyler number 496 among all technology companies located in the United States and Canada.

In addition to qualifying for the Deloitte Technology Fast 500, Tyler Technologies ranked number 28 on the 2003 Deloitte & Touche Texas Crescent Technology Fast 50, a ranking of the 50 fastest growing technology companies in Texas.

John M. Yeaman, Tyler's President and Chief Executive Officer, credits the company's strong growth rate to Tyler's singular focus on the local government technology market. "We have a very focused strategy for success based on providing a broad array of software products and information management services for cities, counties, schools and other local government entities. Our exceptional customer retention rate – over 98% annually – demonstrates how well Tyler's people and products work for our customers, consistently exceeding their expectations."

"Because the Deloitte Technology Fast 500 measures sustained revenue growth over five years, being one of the 500 fastest growing technology companies is North America is an impressive achievement," said Mark Evans, national managing partner of Deloitte's Technology, Media & Telecommunications Group. "Tyler Technologies deserves a lot of credit for its remarkable growth."

Fast 500 Selection and Qualifications

The Fast 500 list is compiled from Deloitte's 20 regional North American Fast 50 programs, nominations submitted directly to the Fast 500, and public company database research. To qualify for the Fast 500, entrants must have had 1998 operating revenues of at least $50,000 USD and $75,000 CD for the United States and Canada, respectively; and 2002 operating revenues must be at least $1 million USD or CD. Deloitte researchers examined financial statements to validate operating revenues.

Entrants must also be public or private companies headquartered in North America and must be a "technology company," defined as a company that owns proprietary technology that contributes to a significant portion of the company's operating revenues; or one that devotes a significant proportion of revenues to the research and development of technology. Using other companies' technology in a unique way does not qualify.
