# Ferguson at Greenbuild 2025: Advancing high-performance, sustainable building together

2025-11-20

Greenbuild brings together leaders of design, construction and sustainability to shape the future of the built environment. This year, Ferguson made a strong debut in Los Angeles, showcasing our commitment to delivering high-performance, sustainable solutions for customers across commercial and residential building landscapes.

With more than 10,000 attendees including architects, engineers, contractors, developers and specifiers, our booth highlighted solutions that reduce energy use, optimize building performance and deliver long-term value. Ferguson experts demonstrated innovations in water reuse, HVAC, mechanical solutions, water heating, IAQ and stormwater management, reinforcing our role as a trusted partner beyond products – through expertise, collaboration and strategic brands.

Partnering with leading manufacturers

We featured leading manufacturers like Durastar, Rheem, A. O. Smith, Bradford White, Generac, R-Tank, EcoRaster and Greyter, connecting customers to technologies that enable:

- Lower operating costs

- Improved indoor environmental quality
- Reduced greenhouse gas emissions
- Compliance with emerging building performance standards

"Greenbuild is about collaboration and progress," explained Stephanie Vega, Ferguson's Director of Sustainable Solutions. "We not only showcased a sampling of our expansive residential and non-residential sustainable product offering but more importantly, the subject matter expertise that comes with partnering with Ferguson - helping our customers build smarter, more resilient spaces from the ground up."

Ferguson's debut at Greenbuild marks an exciting step toward a more sustainable environment – together with our customers and partners.
