NEWS RELEASE

Michael Wong: A rising star in the environmental sector

2024-06-01

Michael Wong, Ferguson's Senior Manager of Environmental Sustainability, was named a sustainability leader among the GreenBiz 30 Under 30. His role in shaping and executing the company's environmental objectives has earned him recognition on this list honoring early career sustainability professionals driving change at scale at the world's largest organizations.

"Ferguson has a unique opportunity to make the built world more sustainable by selling products like heat pumps and smart thermostats," explained Wong. "We also want to show thought leadership in managing the environmental impact from our operations. I think walking the walk by making our own fleet and facilities more efficient is crucial to embedding a culture of sustainability across our business."

Wong has made a difference in his career at Ferguson. He's established the company's carbon accounting platform, conducted Ferguson's first climate-related risk and opportunity assessment, and developed our climate supplier engagement strategy. He also led efforts to procure renewable energy by securing the company's first Virtual Power Purchase Agreement. Since its launch in December 2023, the wind farm in Texas has produced over 100,000 Megawatt-hours of energy which is about half of Ferguson's annual electricity consumption. Ferguson has procured 30 medium- and heavy duty all-electric trucks and installed the charging infrastructure across five locations in

California. The first batch of vehicles has already logged an impressive 100,000 miles and the remaining trucks are expected to arrive over the next few months.
