NYSE: CDE

June 24-25, 2015

Cautionary Statements

This presentation contains forward-looking statements within the meaning of securities legislation in the United States and Canada, including statements regarding anticipated repositioning, cash flow, returns, production, costs, grades, margins, mine life, exploration potential, crushing rates, exploration efforts, conversion of resources to reserves, mine sequencing, recovery rates, the anticipated benefits of the Wharf acquisition, capital expenditures, and POA 10 approval and construction timelines at Rochester. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause Coeur's actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors include, among others, the risk that some or all of the anticipated benefits of the Wharf and Paramount acquisitions will not be realized, the risks and hazards inherent in the mining business (including risks inherent in developing large-scale mining projects, environmental hazards, industrial accidents, weather or geologically related conditions), changes in the market prices of gold and silver and a sustained lower price environment, the uncertainties inherent in Coeur's production, exploratory and developmental activities, including risks relating to permitting and regulatory delays, ground conditions, grade variability, any future labor disputes or work stoppages, the uncertainties inherent in the estimation of gold and silver ore reserves, changes that could result from Coeur's future acquisition of new mining properties or businesses, reliance on third parties to operate certain mines where Coeur owns silver production and reserves and the absence of control over mining operations in which Coeur or its subsidiaries hold royalty or streaming interests and risks related to these mining operations including results of mining and exploration activities, environmental, economic and political risks of the jurisdiction in which the mining operations are located, the loss of any third-party smelter to which Coeur markets silver and gold, the effects of environmental and other governmental regulations, the risks inherent in the ownership or operation of or investment in mining properties or businesses in foreign countries, Coeur's ability to raise additional financing necessary to conduct its business, make payments or refinance its debt, as well as other uncertainties and risk factors set out in filings made from time to time with the United States Securities and Exchange Commission, and the Canadian securities regulators, including, without limitation, Coeur's most recent reports on Form 10-K and Form 10-Q. Actual results, developments and timetables could vary significantly from the estimates presented. Readers are cautioned not to put undue reliance on forward-looking statements. Coeur disclaims any intent or obligation to update publicly such forward-looking statements, whether as a result of new information, future events or otherwise. Additionally, Coeur undertakes no obligation to comment on analyses, expectations or statements made by third parties in respect of Coeur, its financial or operating results or its securities.

W. David Tyler, Coeur's Vice President, Technical Services and a qualified person under Canadian National Instrument 43-101, supervised the preparation of the scientific and technical information concerning Coeur's mineral projects in this presentation (which, for the avoidance of doubt, excludes the Wharf mine). Mineral resources are in addition to mineral reserves and do not have demonstrated economic viability. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized. For a description of the key assumptions, parameters and methods used to estimate mineral reserves and resources, as well as data verification procedures and a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, Canadian investors should see the Technical Reports for each of Coeur's properties as filed on SEDAR at www.sedar.com.

Cautionary Note to U.S. Investors - The United States Securities and Exchange Commission permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We may use certain terms in public disclosures, such as "measured," "indicated," "inferred" and "resources," that are recognized by Canadian regulations, but that SEC guidelines generally prohibit U.S. registered companies from including in their filings with the SEC. U.S. investors are urged to consider closely the disclosure in our Form 10-K which may be secured from us, or from the SEC's website at http://www.sec.gov.

Non-U.S. GAAP Measures - We supplement the reporting of our financial information determined under United States generally accepted accounting principles (U.S. GAAP) with certain non-U.S. GAAP financial measures, including adjusted costs applicable to sales per silver equivalent ounce. We believe that this adjusted measure provides meaningful information to assist management, investors and analysts in understanding our financial results and assessing our prospects for future performance. We believe this adjusted financial measure is important indicators of our recurring operations because it excludes items that may not be indicative of, or are unrelated to our core operating results, and provides a better baseline for analyzing trends in our underlying businesses. We believe adjusted costs applicable to sales per silver equivalent ounce is an important measure in assessing the Company's overall financial performance. Silver equivalence assumes silver to gold ratio of 60:1.

Overview of Coeur Mining

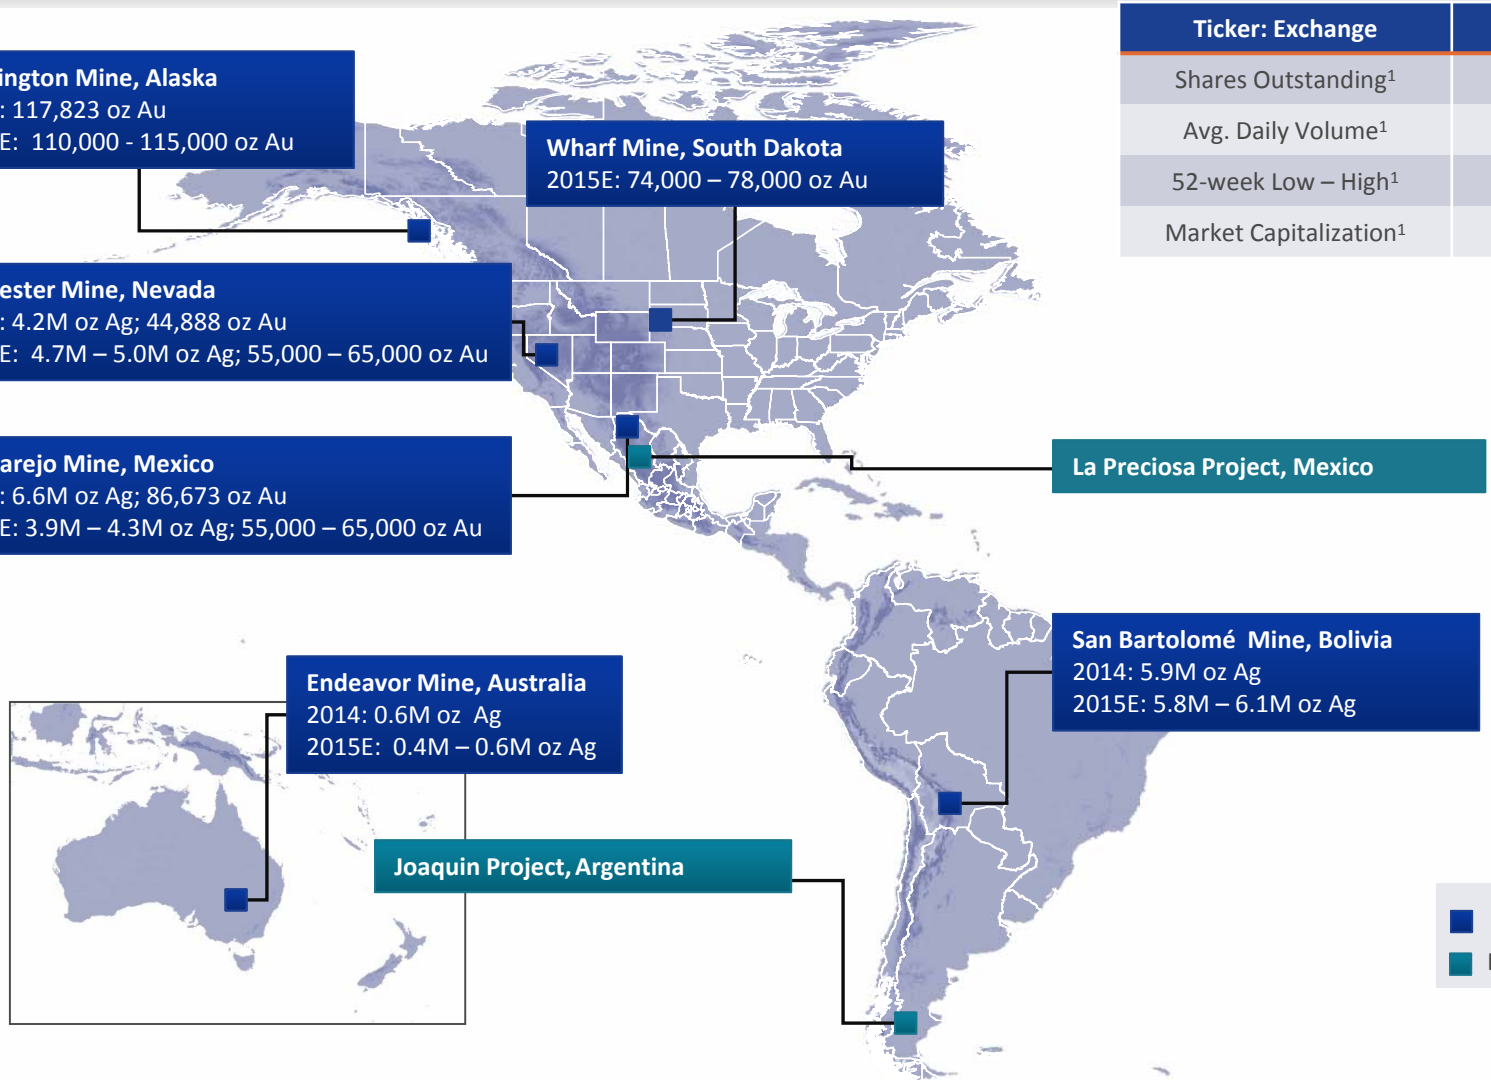

Investment Considerations

- Diversified portfolio of silver and gold mines
- Well-advanced repositioning which may not be fully appreciated in the market
- Executing strategy to reduce costs, improve returns, and drive significant future free cash flow

Palmarejo	Rochester	Kensington	San Bartolomé	Wharf
				

Portfolio Includes 2 of the Top 15 Largest Primary Silver Mines

Ticker: Exchange	CDE: NYSE
Shares Outstanding[1]	136.0M

Rochester Mine

Lovelock, Nevada

June 24, 2015

Rochester at a Glance

Location	Lovelock, Nevada
Ownership	100%
Land position	10,800 acres
Start up	October 1986
Initial capex	$24 million
Mine type	Open-pit
Mining method	Conventional open-pit
Ore processing	Crushing
Metal recovery	Heap leach
Final product	Silver and gold doré
Employees	~300
2014 production	4.2M oz Ag; 44,888 oz Au
2015E production	4.7 – 5.0M oz Ag; 55,000 – 65,000 oz Au
2014 Adj CAS/AgEq ounce[1]	$14.33
2015E Adj CAS/AgEq ounce[1]	$12.50 - $14.00

2015 production and cost guidance as of May 4, 2015.
1. See non-GAAP reconciliation tables in the appendix to this presentation.

Second Largest Primary Silver Mine in the United States

- Owned and operated by Coeur Mining since 1983 and in production since 1986
- Material is crushed at one of two crushing plants, or placed directly on a heap leach pad
  - Ore is leached with cyanide to extract the precious metals
- A Merrill Crowe plant recovers metals from solution and a refinery produces a silver/gold doré
- Planning for heap leach expansion project underway (POA10) to increase leach pad capacity by 120 million tons
  - Permitting process successfully completed in previous instances
- Substantial production upside through opportunity to extend mine life
- 2014 Improvements:
  - Upgraded crusher circuit: commissioned new in-pit crusher and added metal removal system to primary crushing plant
  - Added to the mine fleet to drive efficiencies and lower unit costs
  - Completed process optimization: added 5th filter press and improved solution management

Rochester Operating and Financial Overview

- Completed 72 million ton leach pad capacity expansion in 2013
- Production ramp-up on plan, with double-digit increase in silver-equivalent production expected for second consecutive year in 2015
- Several expansion opportunities on the horizon
- Recent positive drill results in high-grade structures
- Expected to be one of the highest-return assets in Coeur's portfolio:
  - Attractive jurisdiction
  - Low capital requirements
  - Low execution risk (26-year operating history)
  - Abundant reserves

Financial Stats (in millions, except per ounce amounts)	1Q 2015	Full Year 2014	Full Year 2013
Revenue	$44.0	$123.8	$119.3
Costs applicable to sales	$31.4	$91.5	$77.9
Capex	$3.3	$11.9	$29.4
Adj. costs applicable to sales/AgEq oz[1]	$12.95	$14.33	$15.52

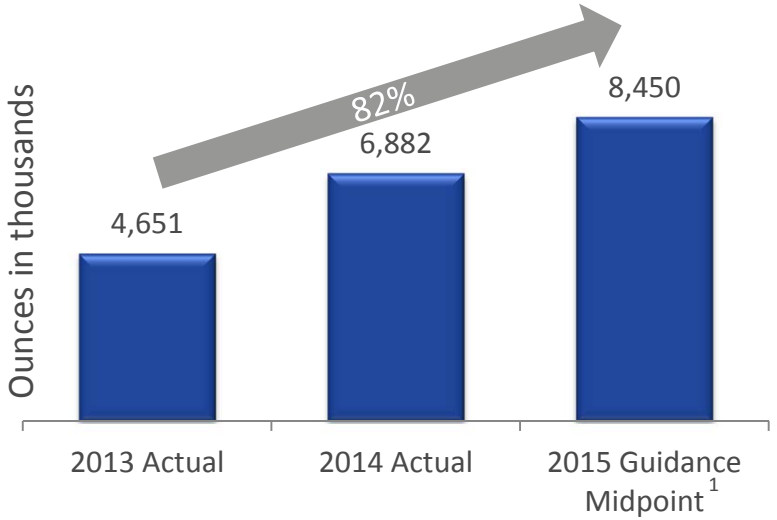

Operating Stats	1Q 2015	Full Year 2014	Full Year 2013
Tons placed (000s)	4,014	14,740	12,312
Silver ounces produced (000s)	1,144	4,189	2,799
Gold ounces produced	13,721	44,888	39,803
Silver equivalent ounces produced (000s)	1,967	6,882	4,651

1. See non-GAAP reconciliation tables in the appendix to this presentation.

Rochester Production Continues to Increase at Lower Costs

- Ramp up of Stage 3 leach pad and upgrades to crushing/loading circuit have significantly reduced mining, processing, and G&A costs
- Opportunity to accelerate scale of operation to lower costs per ton and maximize net cash flow longer-term:
  - Increase crushing rates
  - Install high-rate crushing system
  - Upgrade mining equipment to match higher crushing rates

Significant Growth in AgEq Production

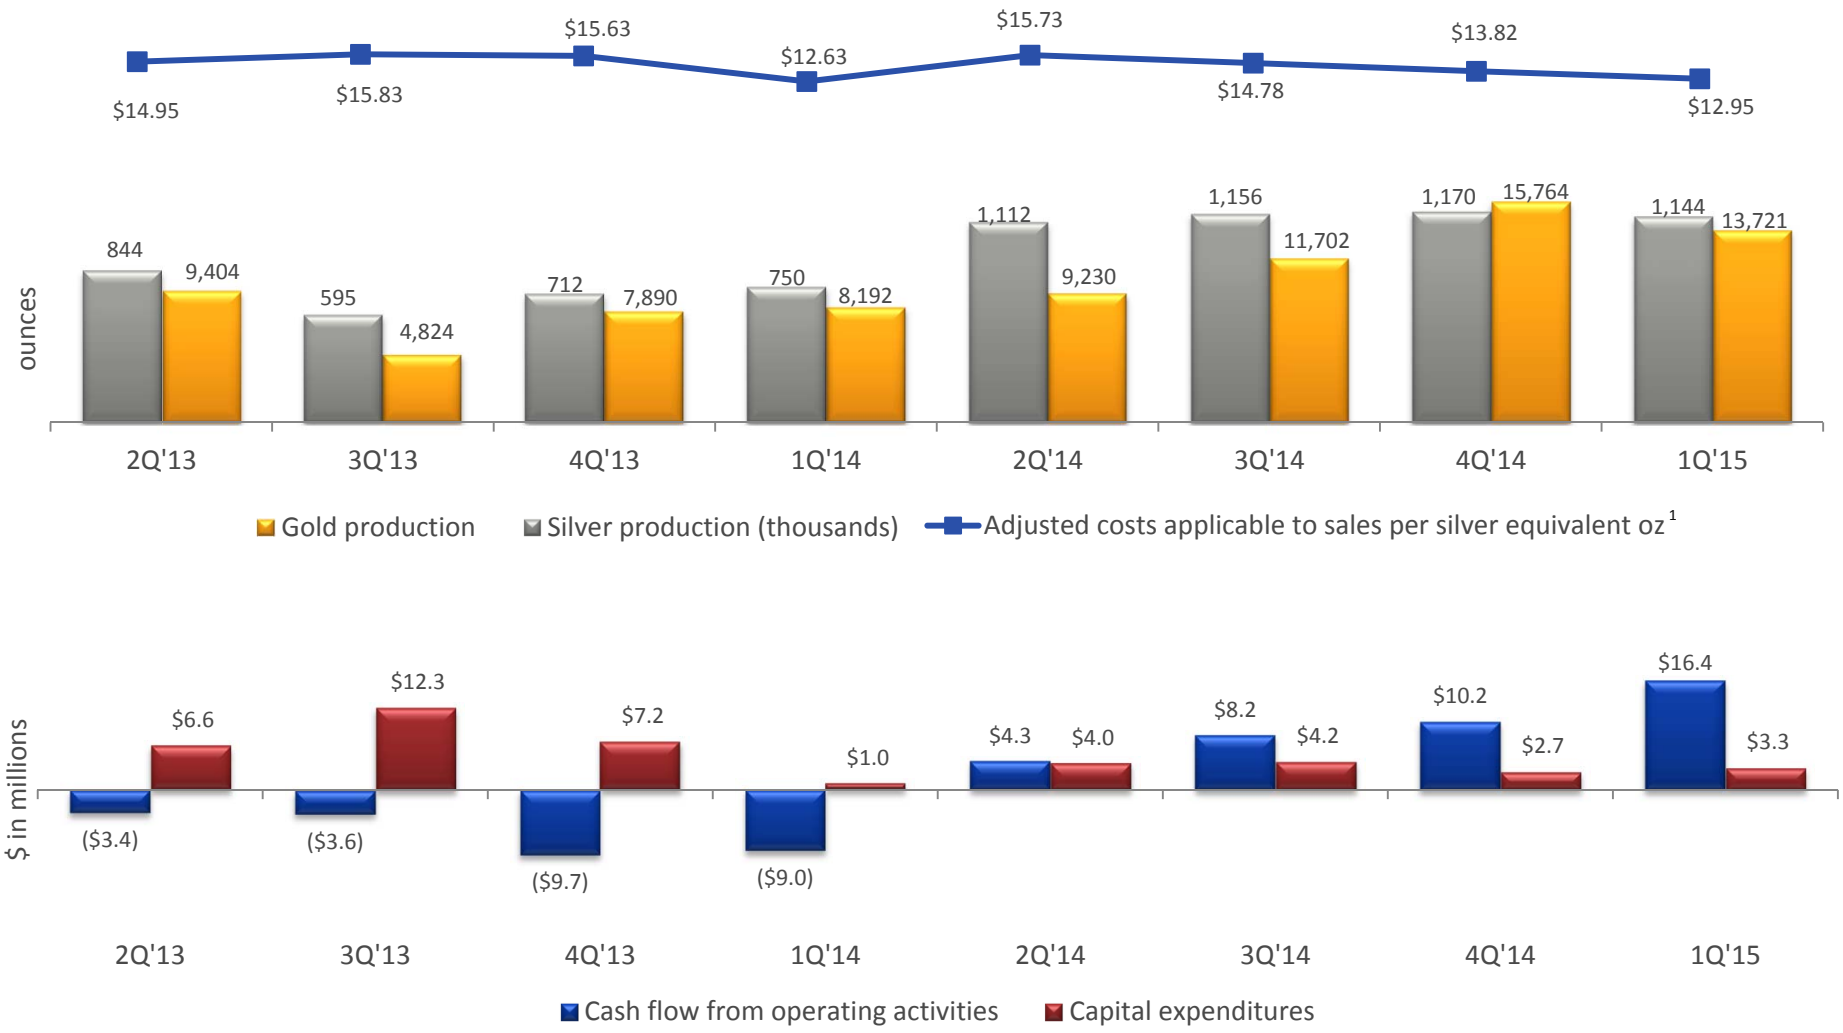

Unit Costs

	1Q 2015	4Q 2014	3Q 2014	2Q 2014	1Q 2014
Ore tons mined	4,021,632	3,947,963	3,922,831	3,496,840	3,534,780
Mining costs per ton mined	$1.53	$1.28	$1.48	$1.22	$2.48
Processing costs per ton processed	$3.33	$2.97	$3.36	$3.72	$4.04
G&A per ton processed	$0.80	$0.81	$0.79	$1.03	$0.78

1. 2015 guidance as of May 4, 2015.

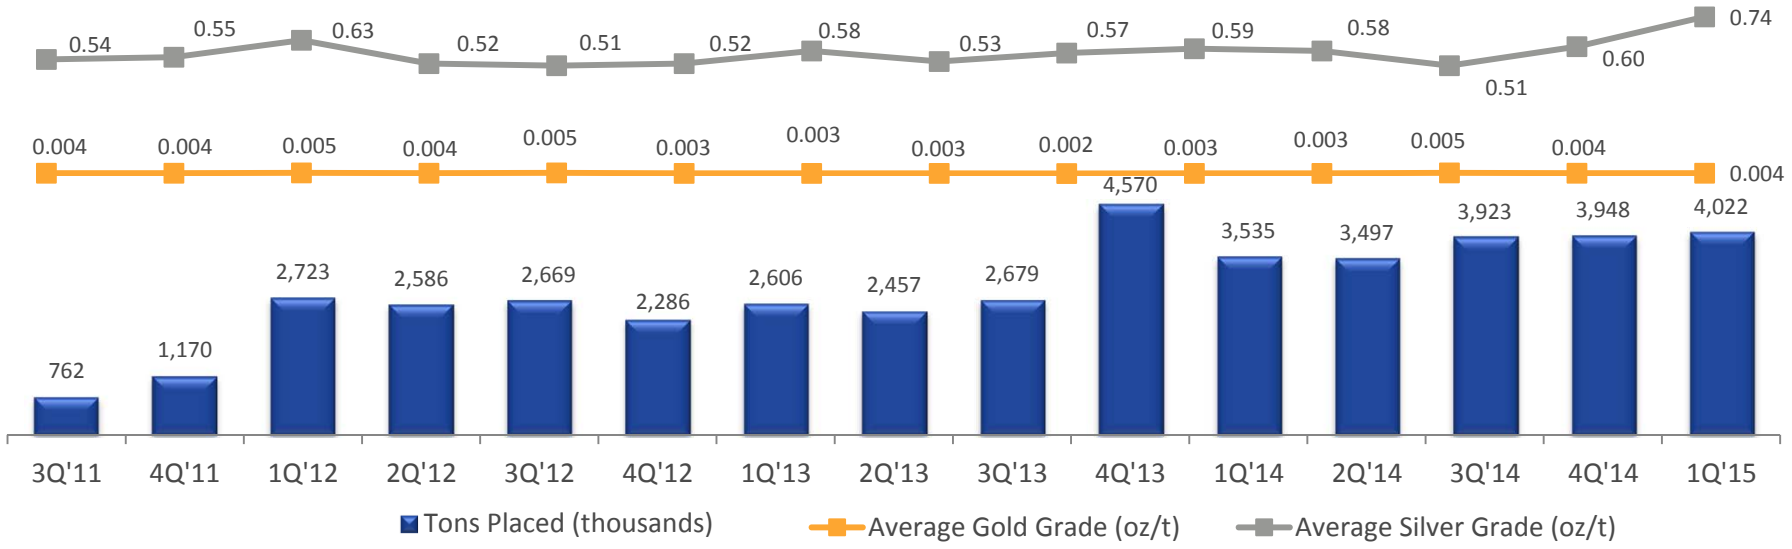

Rochester: Strong Production and Lower Costs Drive Highest Free Cash Flow in Over Two Years

1. See non-GAAP reconciliation tables in the appendix to this presentation.

Rising Tons Placed and Improving Grade Performance

Exploration efforts focused on bringing higher grade material into the mine plan

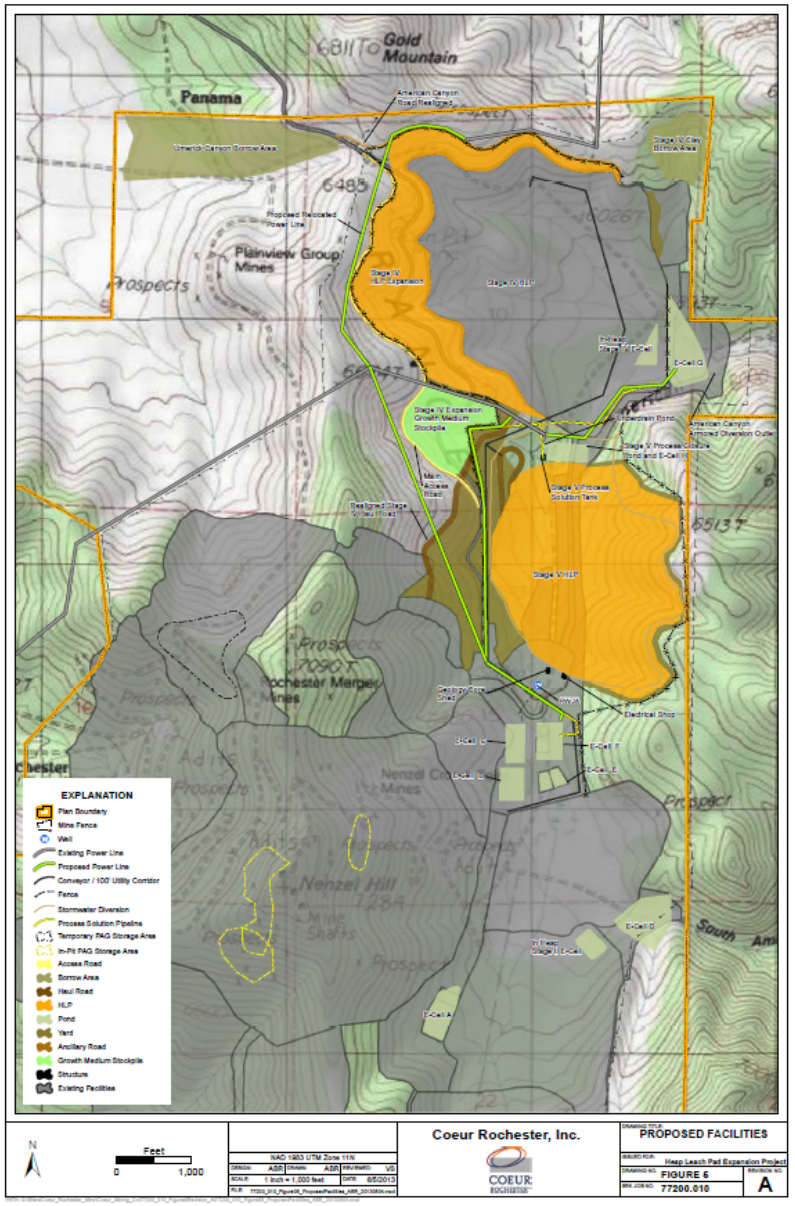

Year-end 2014 Reserves & Resources	Tons (000s)	Grade (oz/ton)		Ounces (000s)	
		Ag	Au	Ag	Au
Proven & Probable Reserves	145,235	0.55	0.004	80,204	518
Measured & Indicated Resources	173,201	0.43	0.003	75,041	491
Inferred Resources	96,039	0.42	0.003	40,789	263

See slides in the appendix for additional information related to mineral reserves and resources.

POA 10: Preparing for the Next Phase of Growth

Proposed expansion is within the permitted mine area and includes:

- Expansion of existing Stage 4 heap leach pad
- Construction of new Stage 5 heap leach pad and ancillary structures
- Minor relocation of access road and utilities
- Relocation of small portion of American Canyon Road
- Updated provisions for future reclamation and closure activities at the mine site
- Approval expected by early 2016

Rochester LOM Plan Summary

Current mine plan includes reserves only – significant opportunity to improve the economics through resource conversion

tons and oz in thousands, $ in millions	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Total
Tons Processed	16,900	18,300	17,800	18,200	18,200	19,100	19,900	16,900	--	--	145,200
Silver Oz Recovered	4,974	4,851	6,062	5,580	5,976	6,084	6,400	6,683	1,970	1,297	49,876
Gold Oz Recovered	60.0	57.2	79.8	71.0	59.4	66.5	81.3	95.9	12.1	8.8	592.1
Operating Cash Flow	$62.3	$47.1	$100.9	$77.6	$72.2	$84.5	$109.6	$147.3	$49.8	$33.8	$785.2
Net Cash Flow	$35.9	$(26.3)	$80.9	$62.8	$10.6	$19.7	$108.6	$146.3	$49.6	$33.7	$521.8

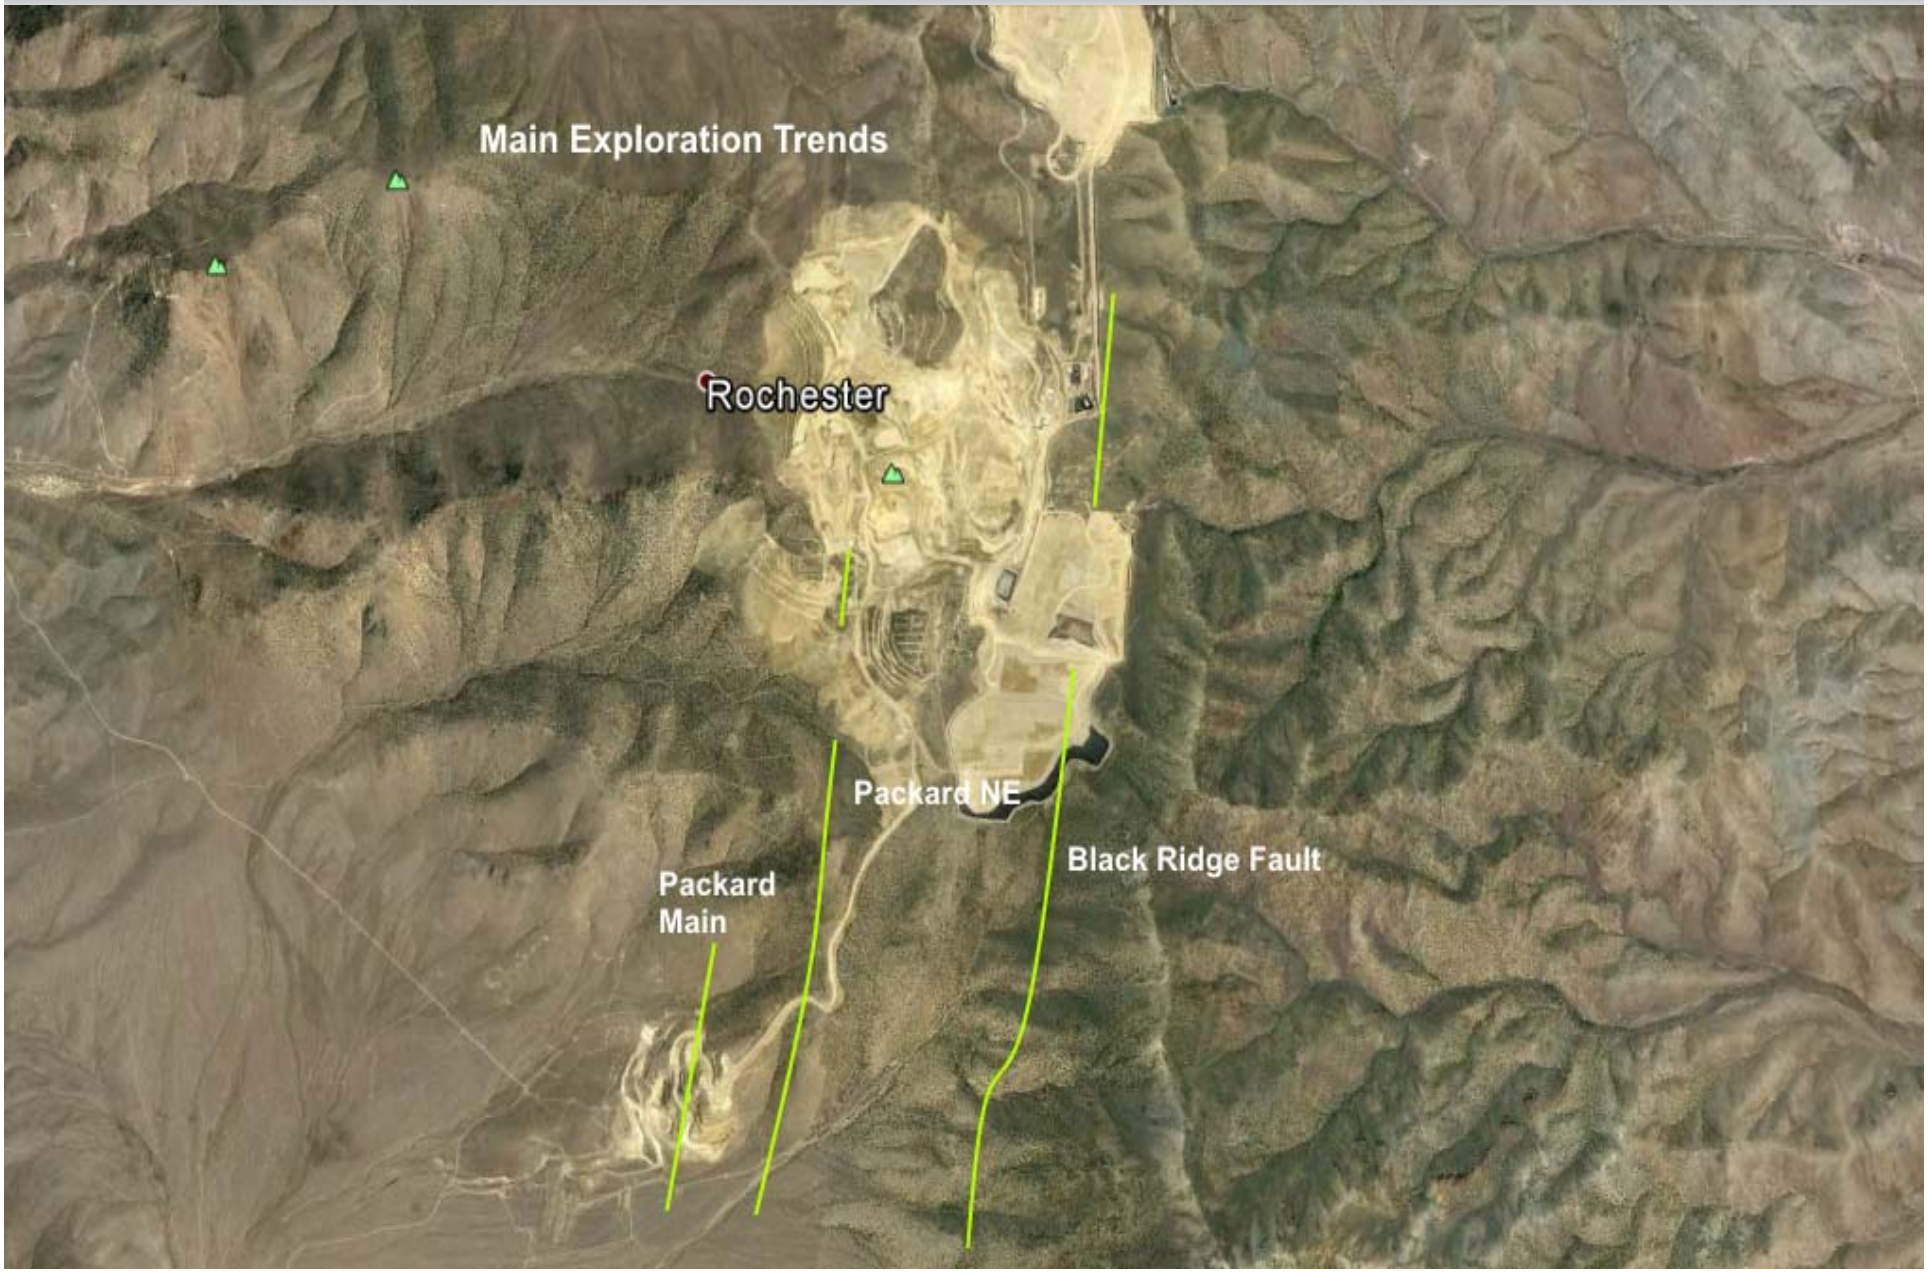

Does not reflect recently announced operating improvements and capex deferral

Source: Technical Report dated February 18, 2015 on file at sedar.com. Please review the Technical Report for a description of the various assumptions and parameters used in preparing the LOM plan. Assumes the mining of reserves only and metal prices of $19/ounce for silver and $1,275/ounce for gold.

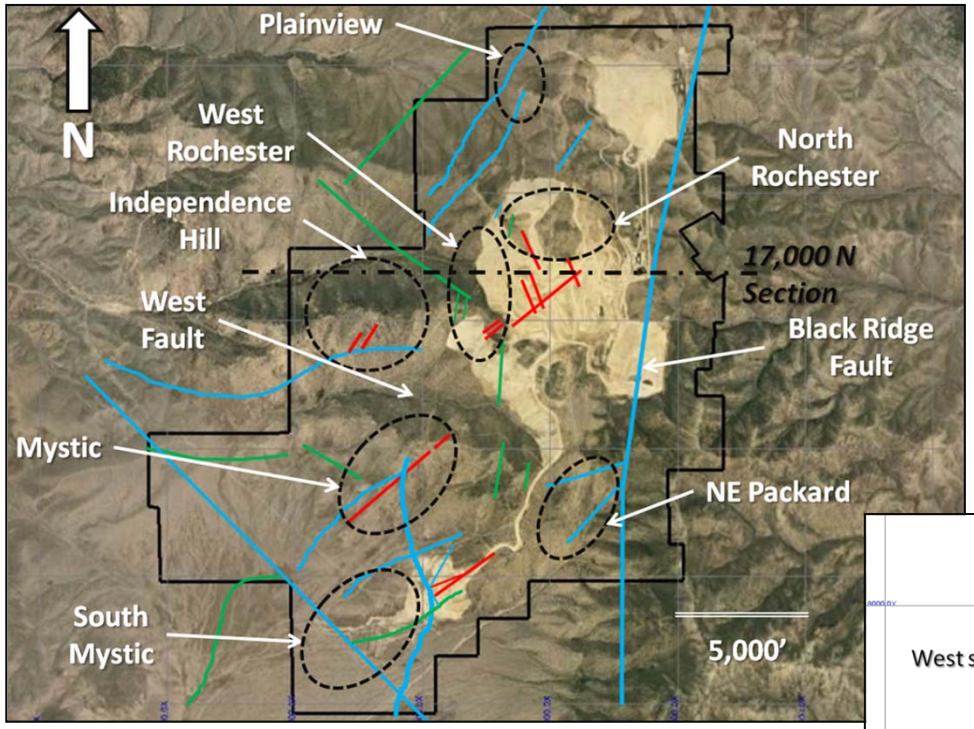

Rochester Looking South

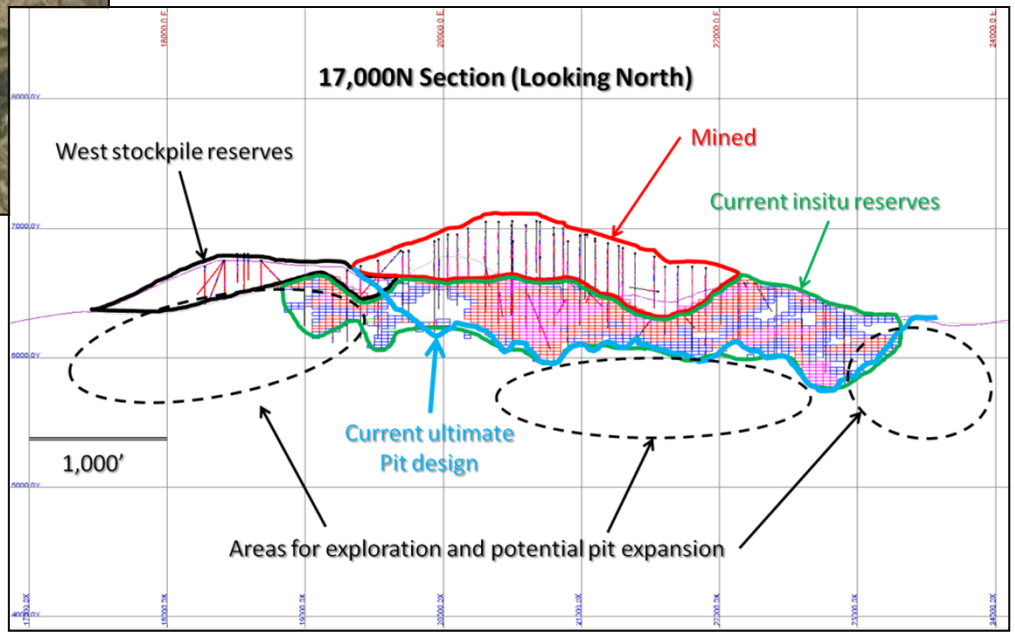

Exploration Trends – Mine Area Close-Up

Rochester - New Targets to Expand In-situ Mineralization

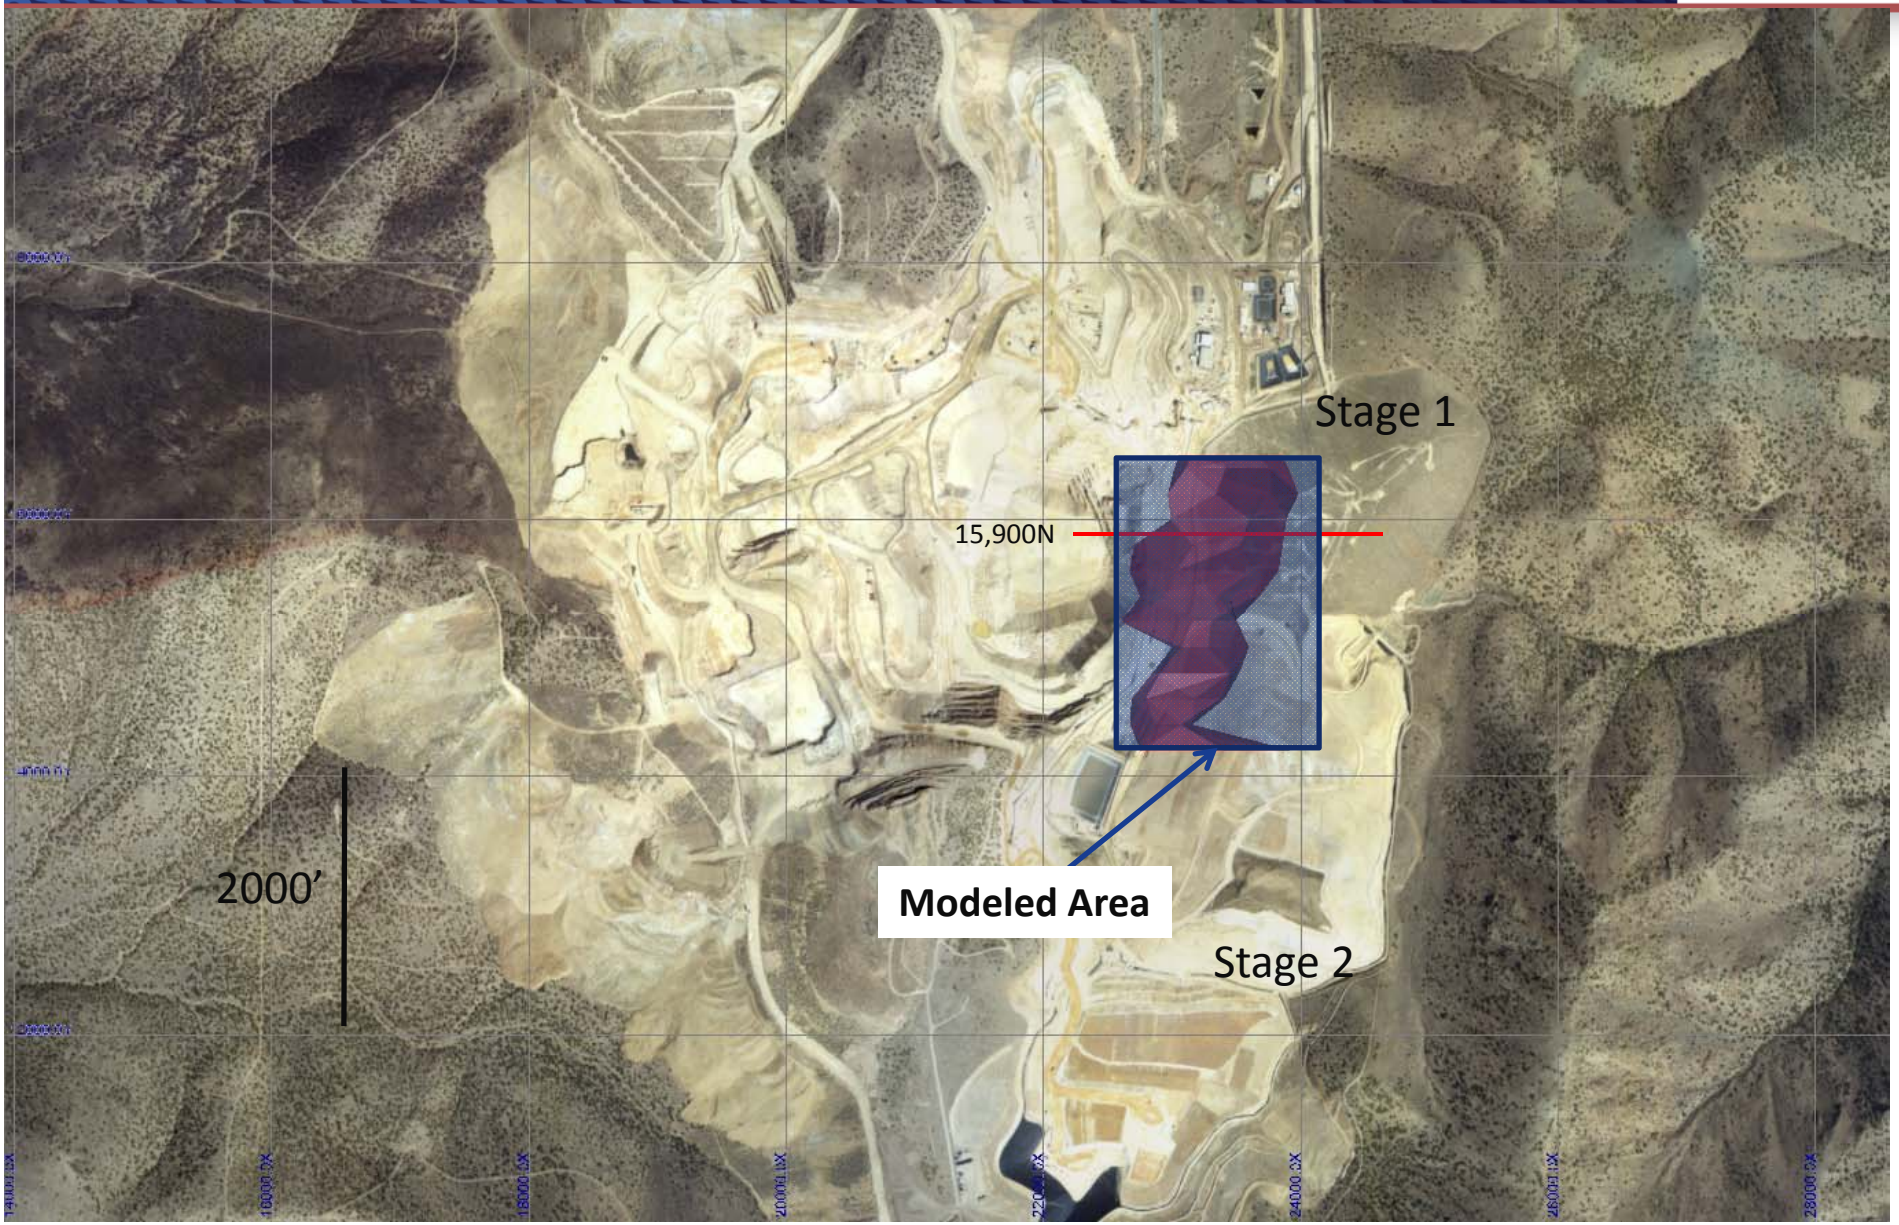

- Review of full district potential underway:
  - Known mineral resources and reserves are within NNE-trending structural corridor and favorable felsic volcanic rocks - Weaver and Rochester formations
- Seven target areas defined thus far
- Black Ridge Fault is common conduit for ore-fluids/mineralization in the Humboldt Range, thus targeting is preferentially focused along this structure

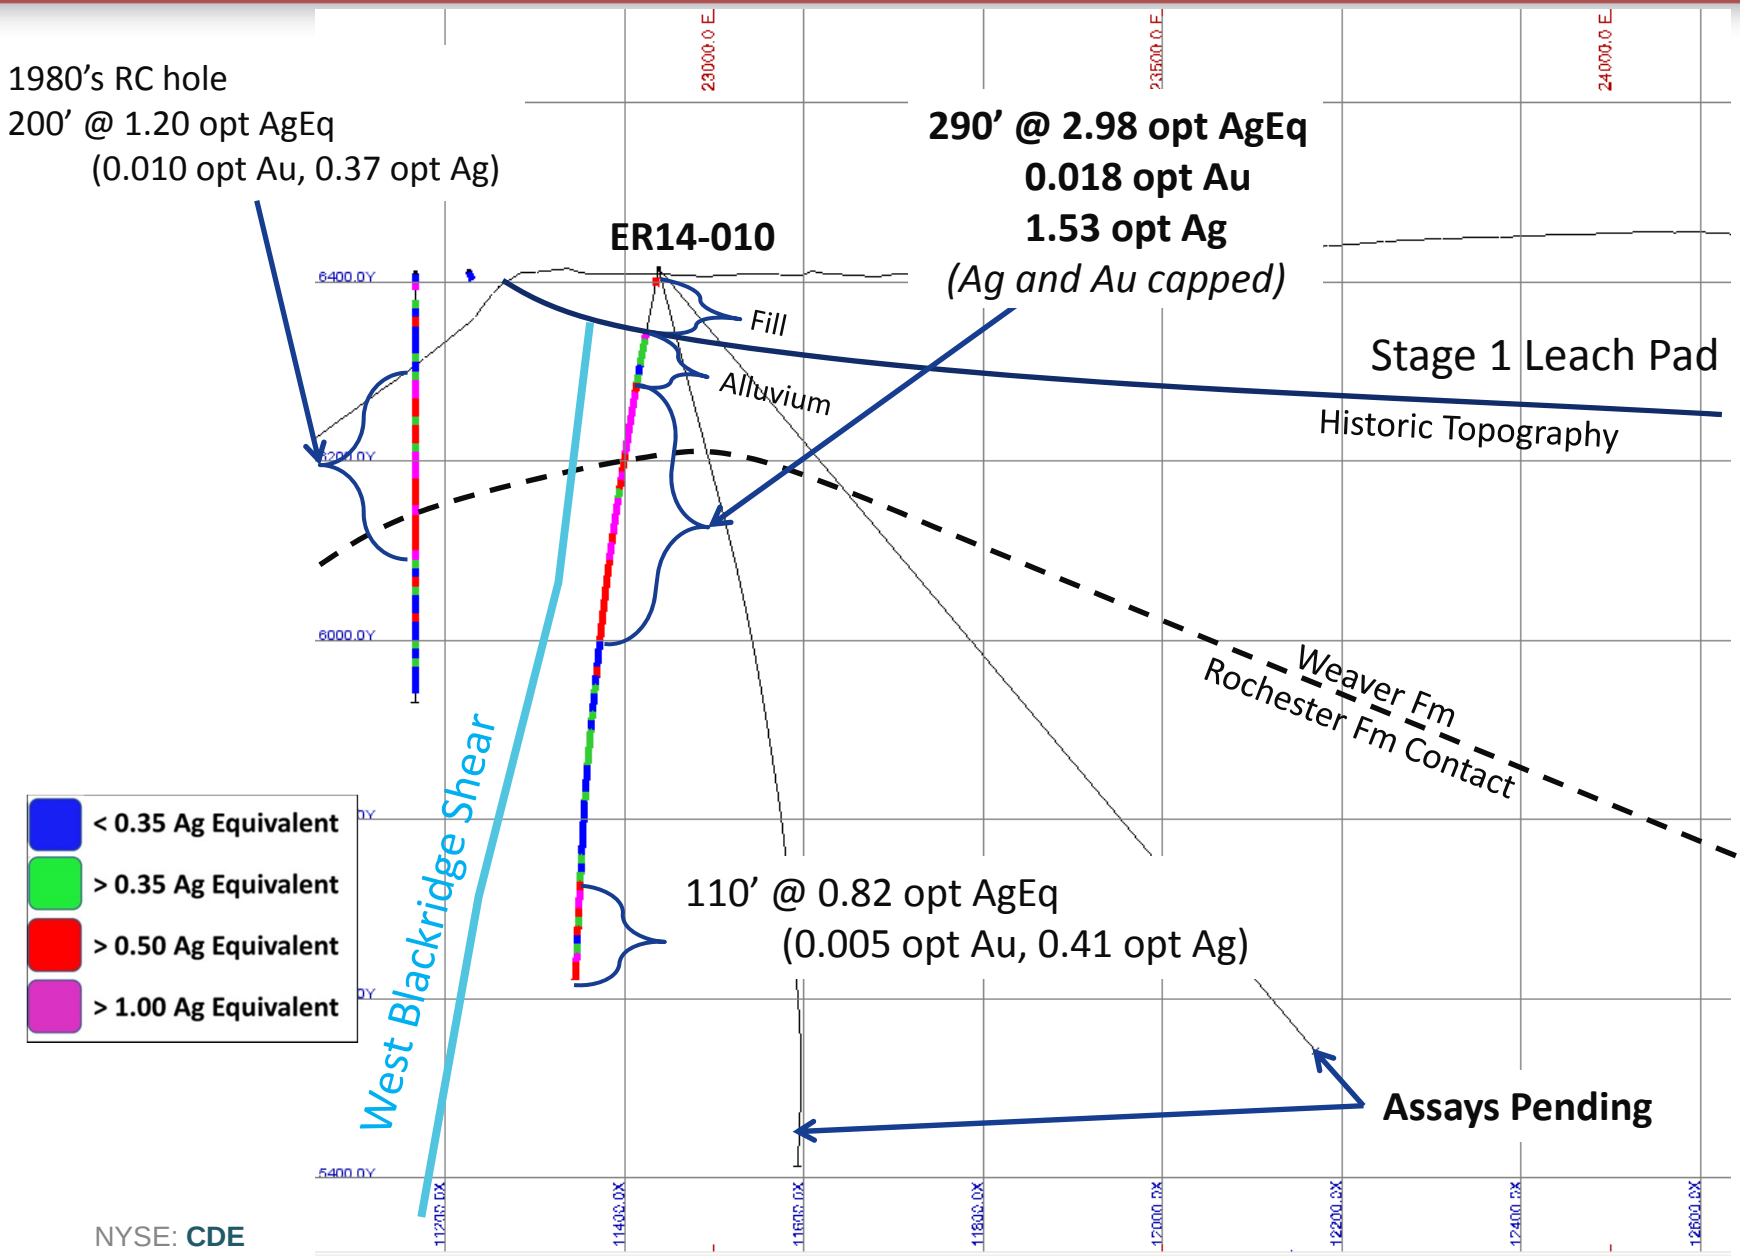

- In addition to new in-situ targets:
  - Excellent potential exists to expand mineral resources and reserves within the Rochester and Nevada Packard deposits (see cross section)

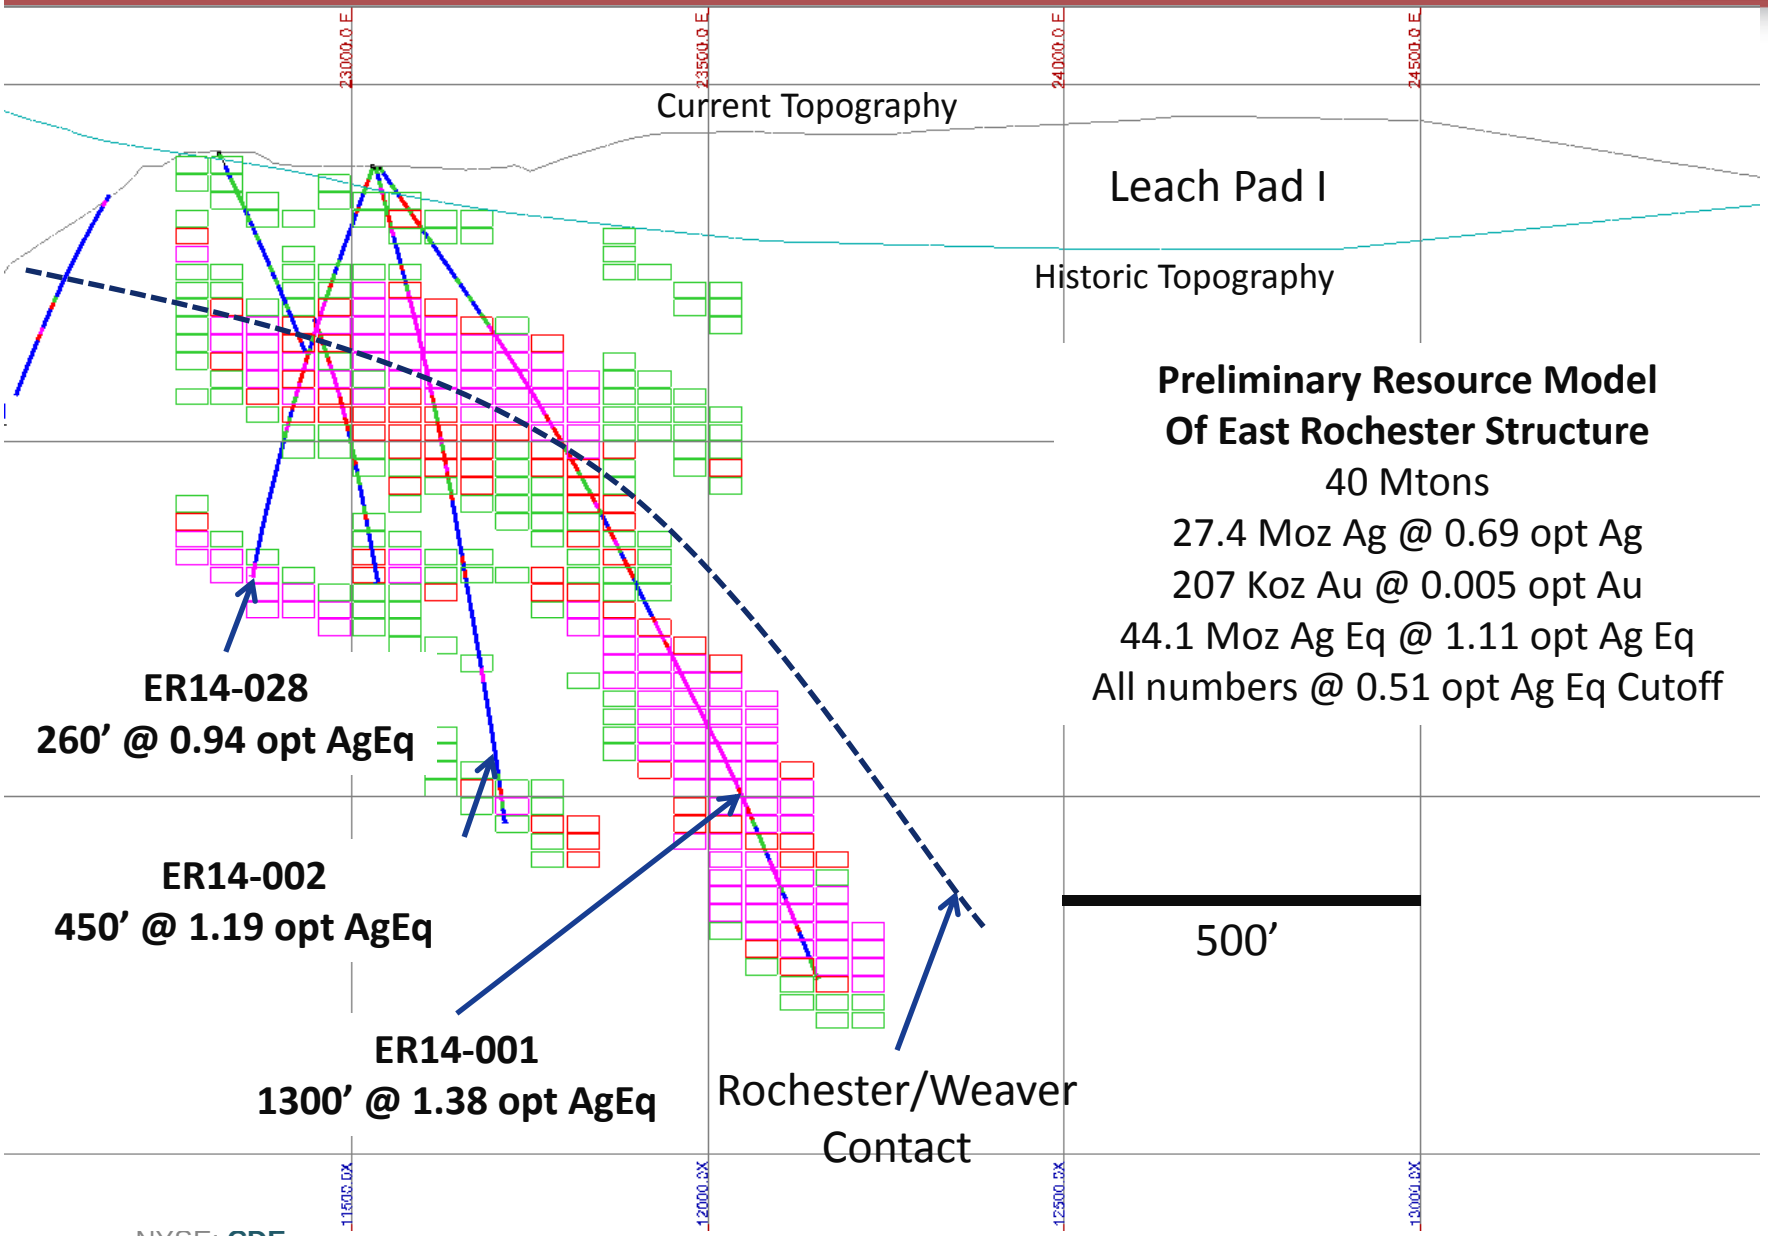

East Rochester

All numbers @ 0.51 opt Ag Eq Cutoff

The Path Forward at Rochester

POA10

- Extend production, increase production rate, reduce costs beginning in 2018

Crushing

- Rising crushing rates

Exploration

- Continue drilling of higher-grade mineralization in-pit and near-pit

Maintain Operating Flexibility

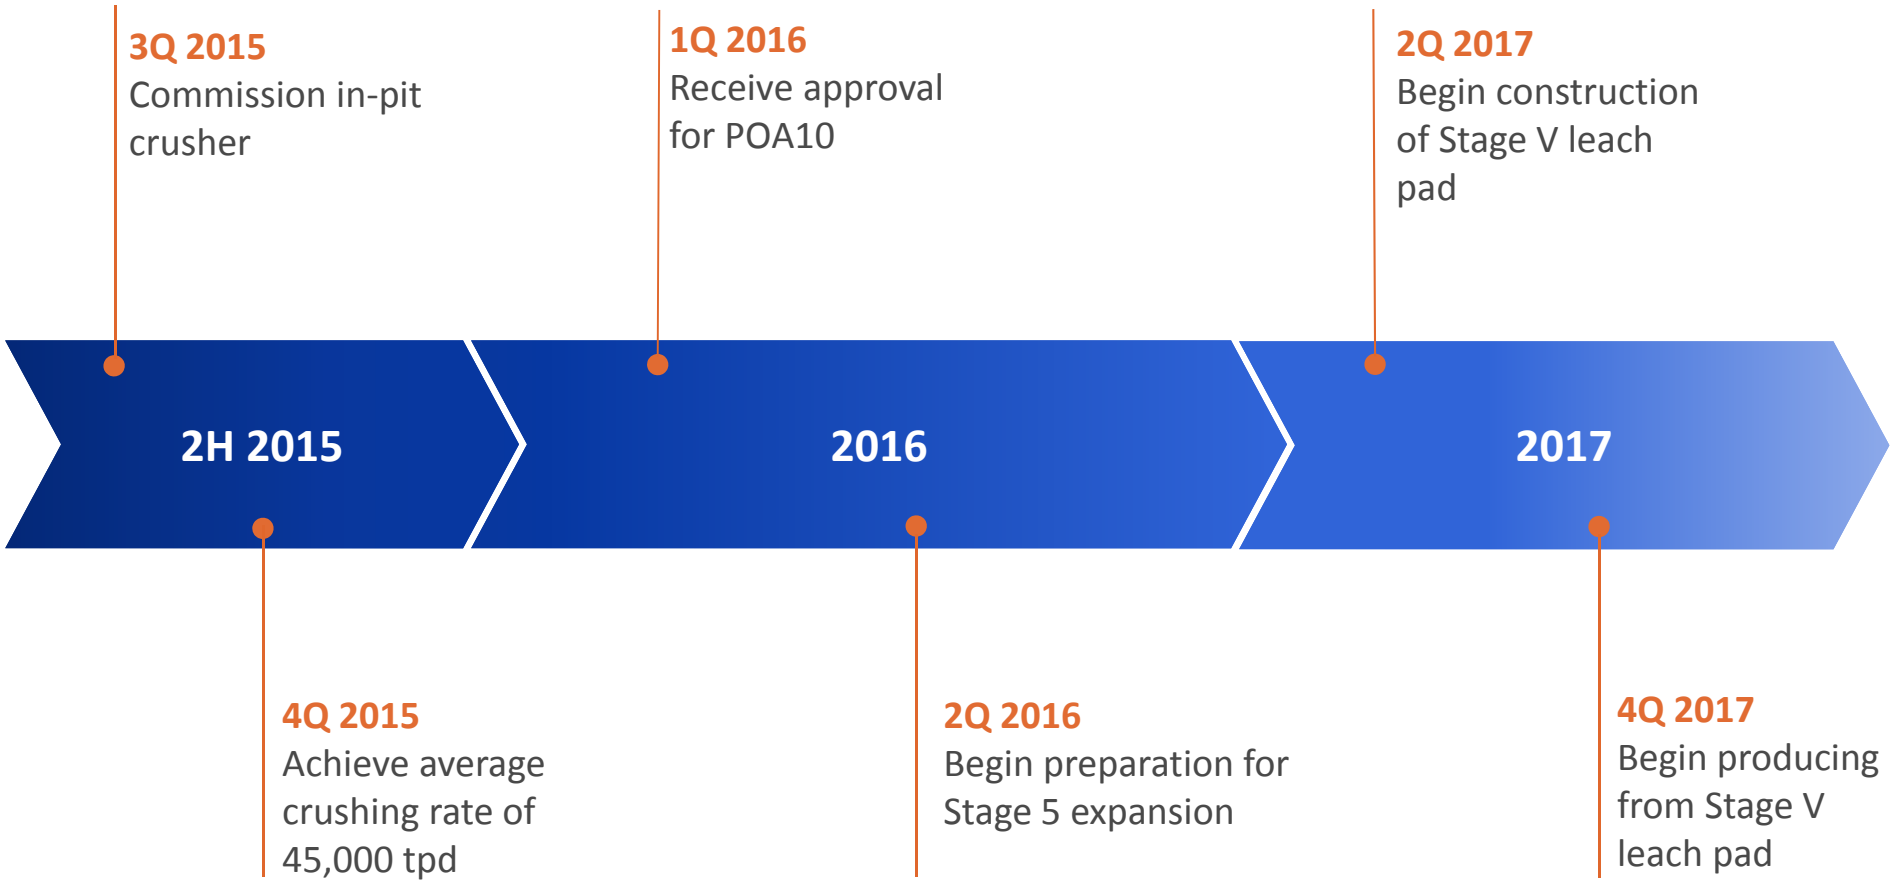

- Optimize mine sequencing

Further Upside

- Large reserve base and scaleable production process presents opportunity for further expansion

- ✓ Expected high-return use of capital
- ✓ Maximizes net cash flow
- ✓ Increases presence in favorable, low-risk jurisdiction

Anticipated Milestones at Rochester

Wharf Mine

Lead, South Dakota

June 25, 2015

Coeur Presenting Team

Frank Hanagarne Jr.
Senior Vice President and Chief Operating Officer
Years in Industry: 34
Years with Coeur: 4

Ken Nelson
General Manager Wharf
Years in Industry: 18
Years with Wharf: 18

Wharf: The Newest Asset in Coeur's Portfolio

- On February 20, 2015, Coeur closed the acquisition of the Wharf gold mine located near Lead, South Dakota from a subsidiary of Goldcorp, Inc.; All cash transaction with a purchase price of $103 million
- Open-pit, heap leach gold mine which has produced more than 2 million ounces of gold over 30+ years
- 7 years of mine life based on existing reserves with exploration upside
- Experienced, stable, and dedicated workforce of approximately 190 employees
- Anticipated to reduce Coeur's consolidated unit costs
- Provides opportunity to take advantage of existing U.S. NOLs

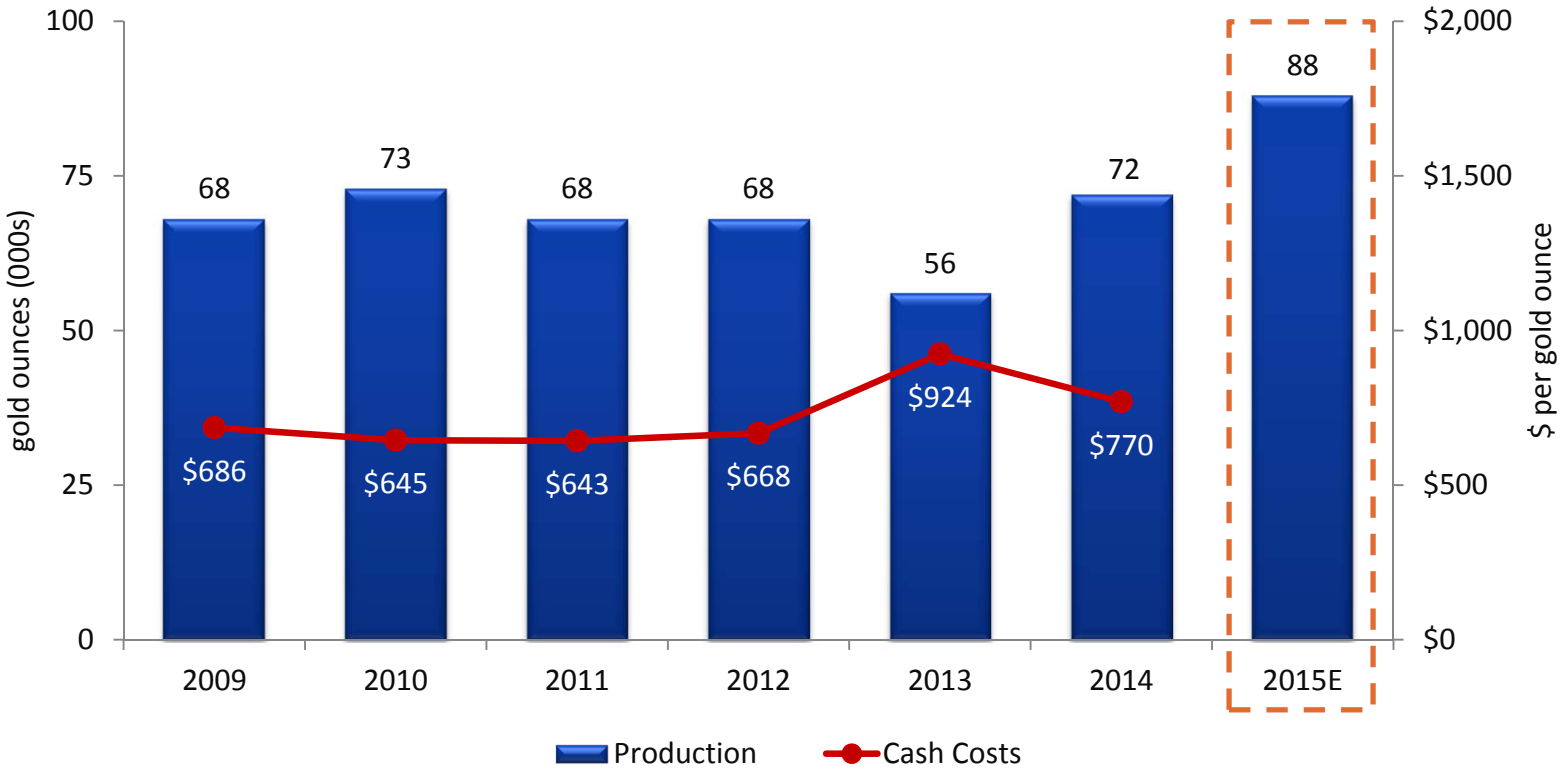

Established Gold Producers in Prolific Mining District

- Located in the Black Hills mining district, the second largest gold producing district in the U.S. after the Carlin district in Nevada
- Wharf is near the Homestake mine, one of the largest historic gold mines in North America which operated continuously for over 125 years
- Property contains several areas of adjoining gold mineralization which have been mined as a series of open pits
- Processing consists of crushing followed by heap leaching and recovery using activated carbon columns
  - Heap leach cycle time of 15-18 months after which the pads are unloaded
  - 3rd party refiner in the U.S. completes further processing
- Expected gold recovery of ~80% for the balance of the mine life

Productivity Assumptions	
Mobile equipment:	
Trucks	14
Loaders	4
Drills	2
Process plant – days	365
Crusher – days	332
Mine operation – days	357
Total material – ton/day	80,000
Crusher – ton/day	11,400
Loader – ton/hour	1,270
Truck – ton/hour	325
Haulage – ton/load	94
Contractor inflation increase	3%
Labor inflation increase	3%

Wharf Production and Cost Profile

Consistent production and cost history with significant production increase expected in 2015

Note: 2015E production represents midpoint of guidance provided by Coeur on May 4, 2015. Historic data based on Goldcorp's public filings.

High-Quality, Cash-Generating, Gold Mine

- Low-cost producer with minimal capital requirements and limited maintenance
- Simple and efficient operation using conventional mining and processing methods
- Expected to increase Company's 2015 EBITDA by over 30% and boost free cash flow
- Adds stable, established source of production and cash flow to Coeur's existing portfolio
- Expected to produce 74,000 – 78,000 ounce of gold for Coeur in 2015 at CAS of $750 - $825 per AuEq ounce[1]

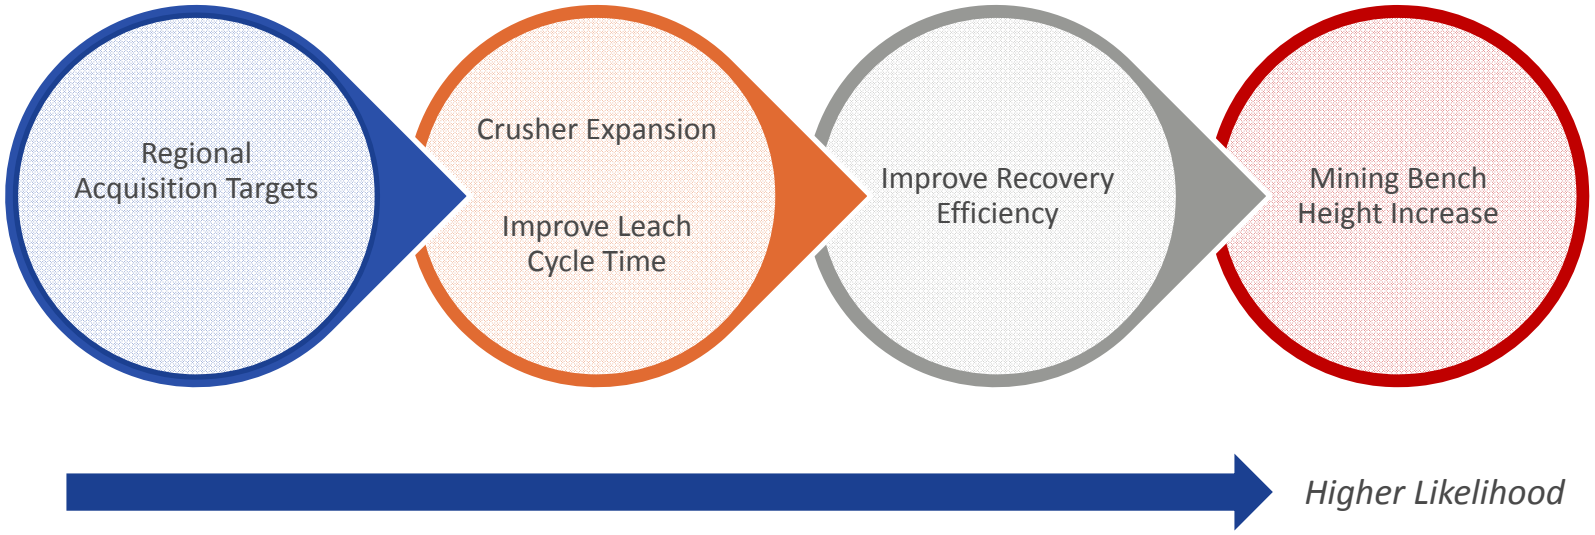

Financial and Operating Statistics	1Q 2015	FY 2014	4Q 2014	3Q 2014	2Q 2014	1Q 2014	FY 2013
Ore processed (short tons in 000s)	416	4,202	1,105	1,194	1,074	828	3,482
Gold production (ounces in 000s)	6.6	72.1	25.9	16.2	15.0	15.0	56.2
Average grade (oz/ton)	0.020	0.022	0.023	0.021	0.021	0.024	0.021
Average recovery rate		80%	80%	80%	80%	80%	80%
Revenue ($ in millions)		$94	$32	$20	$22	$20	$78
All-in sustaining costs per gold ounce		$870	$832	$1,028	$804	$856	$1,165

In addition to immediate free cash flow, Wharf enhances Coeur's geopolitical profile and balances out its portfolio

Note: Data prior to 1Q 2015 based on Goldcorp's public filings. 1Q 2015 represents the time period after the transaction closed on February 20, 2015.
1. 2015 guidance as of May 4, 2015 .

Operating Optimization in Progress

- Improvements to crushing efficiency in 2013 have increased throughput to 4.1 million tons in 2014 from 3.5 million tons in 2013
- 2nd quartile costs compared to U.S./Canadian gold mines
- Low sustaining cost enabled by agreement with Caterpillar that ensures newest, most advanced mining fleet used

Excellent Track Record for Health, Safety, Community Relations, and Environmental Stewardship

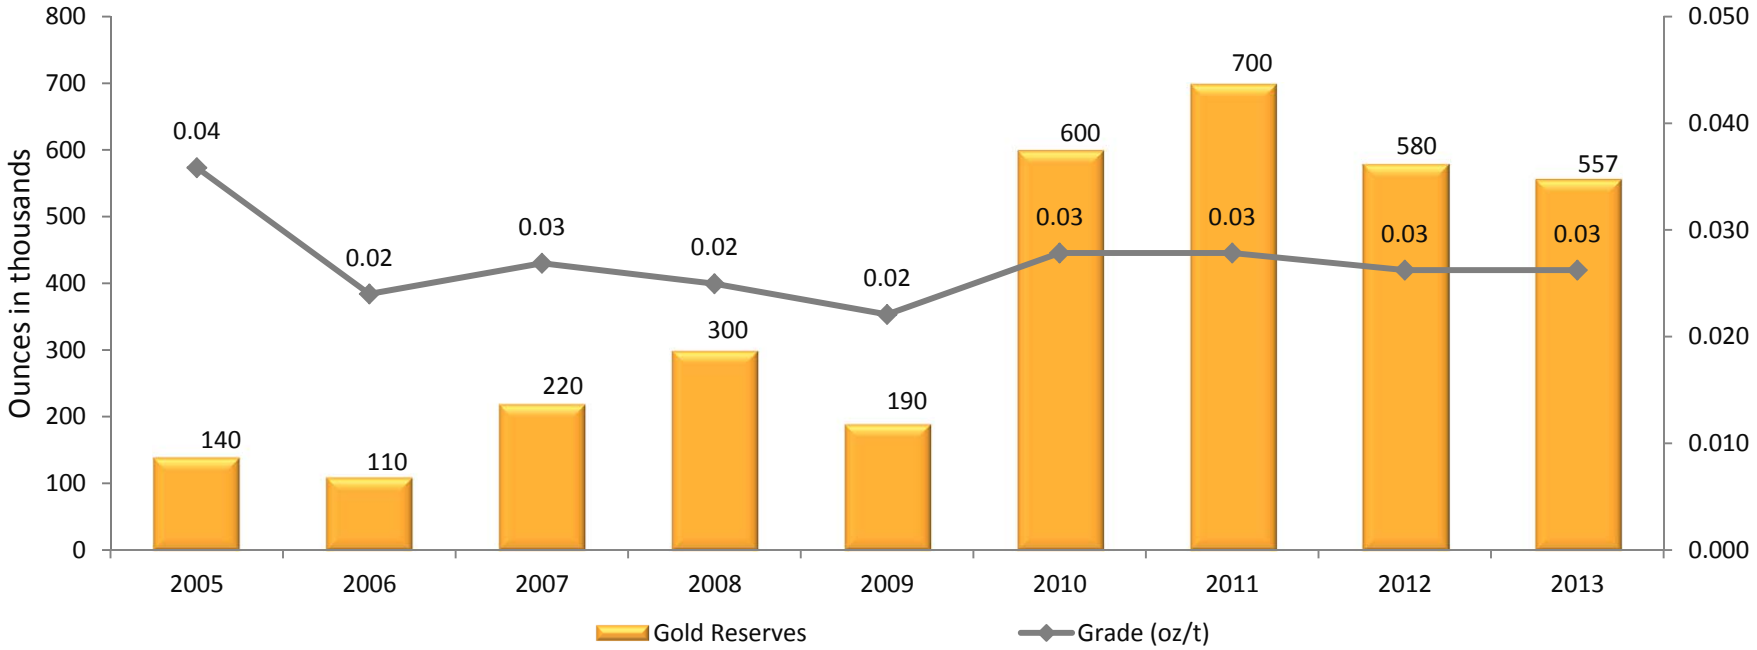

- Highly experienced, stable and dedicated local workforce with strong safety culture
- Ongoing sampling programs monitor air and water quality, wildlife, and reclamation of mined lands
- Progressive reclamation policy – as new areas are mined, reclamation begins immediately on depleted areas
- Strong social license has allowed Wharf to expand its land package/mineable area over time with successful permit extensions
- Significant recognition received for close ties to local communities and for providing substantial benefits (including recent donation to Handley recreation center)

Potential Exploration Upside to Increase Mine Life

- In production since 1983 (initial 3 year mine life has now been in operation for more than 30 years)
  - Property totals approximately 5,000 acres, consisting of 584 patented and 96 unpatented mining claims
- Long history of reserve replacement
- Positive historical reconciliation between gold ounces in the control and reserve model
  - Since 2010, significant positive reconciliation resulted from waste conversion to ore due to additional information gained from production drilling

Note: Historic reserve data based on Goldcorp's public filings.

Wharf Exploration Strategy

- Mine life extension permit received in 2011
- Oxide exploration targets not reflected in mine plan, including Two Johns
- Geological potential for deep sulphide resource beneath the existing operation

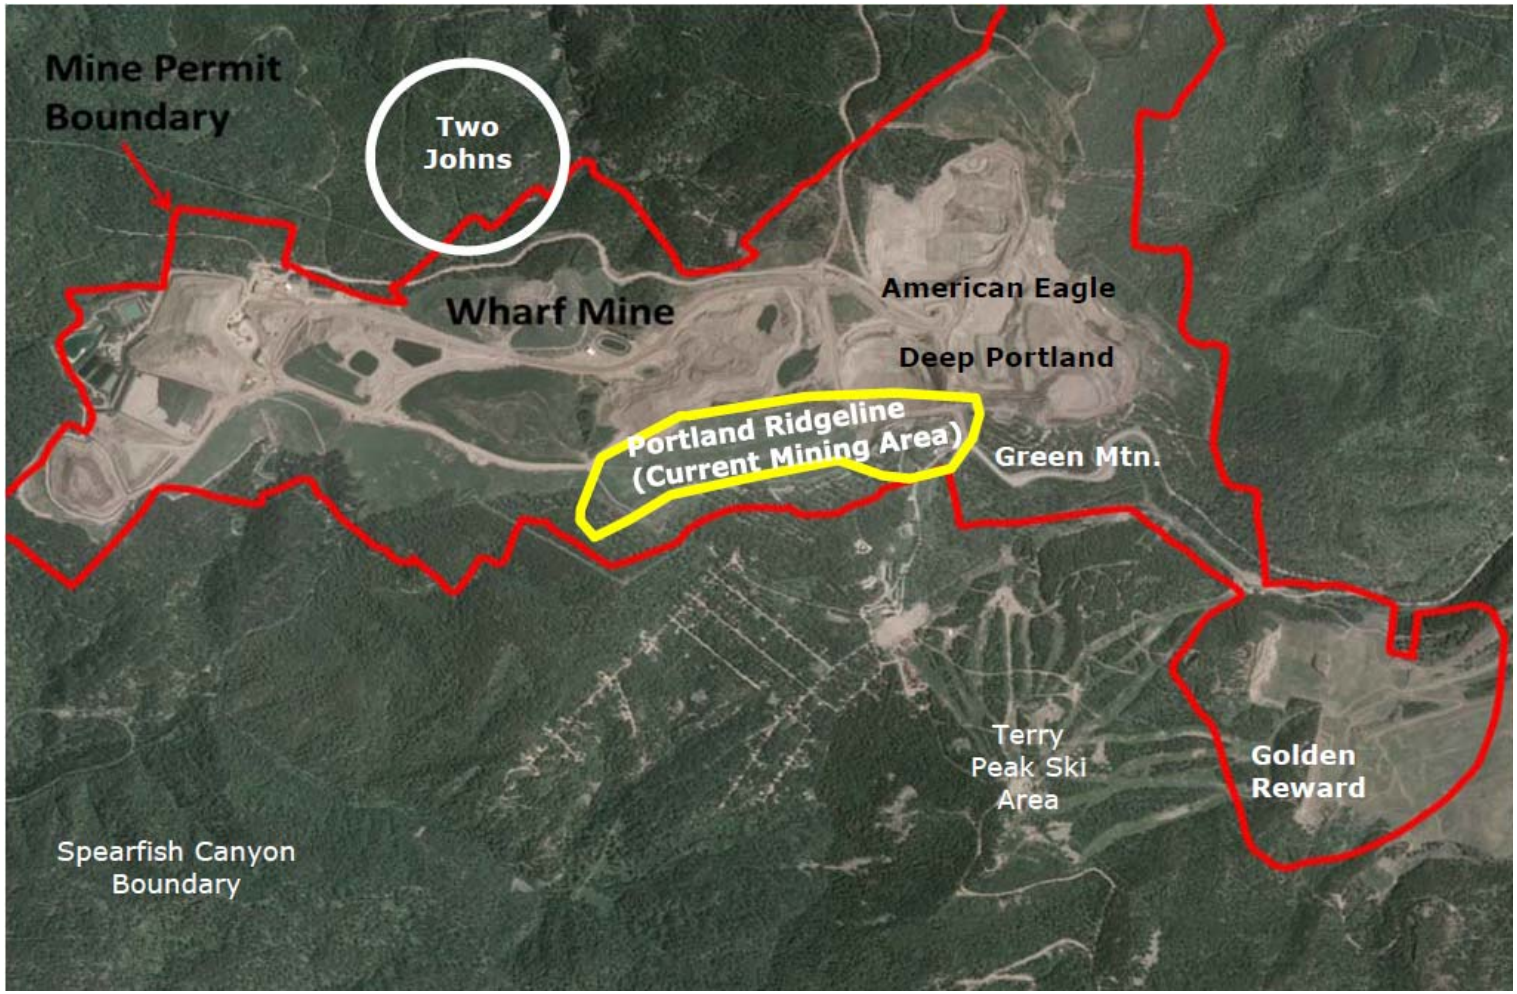

2015 program at the mine:

- 37,000 feet of resource upgrade drilling: $900k program underway in A-Frame area, later in Portland area
- 5,000 feet of resource discovery drilling: targeting Two Johns area – to begin following upgrade drilling program
- Mapping, sampling and evaluating genetic model for mineralization through Colorado School of Mines – currently underway

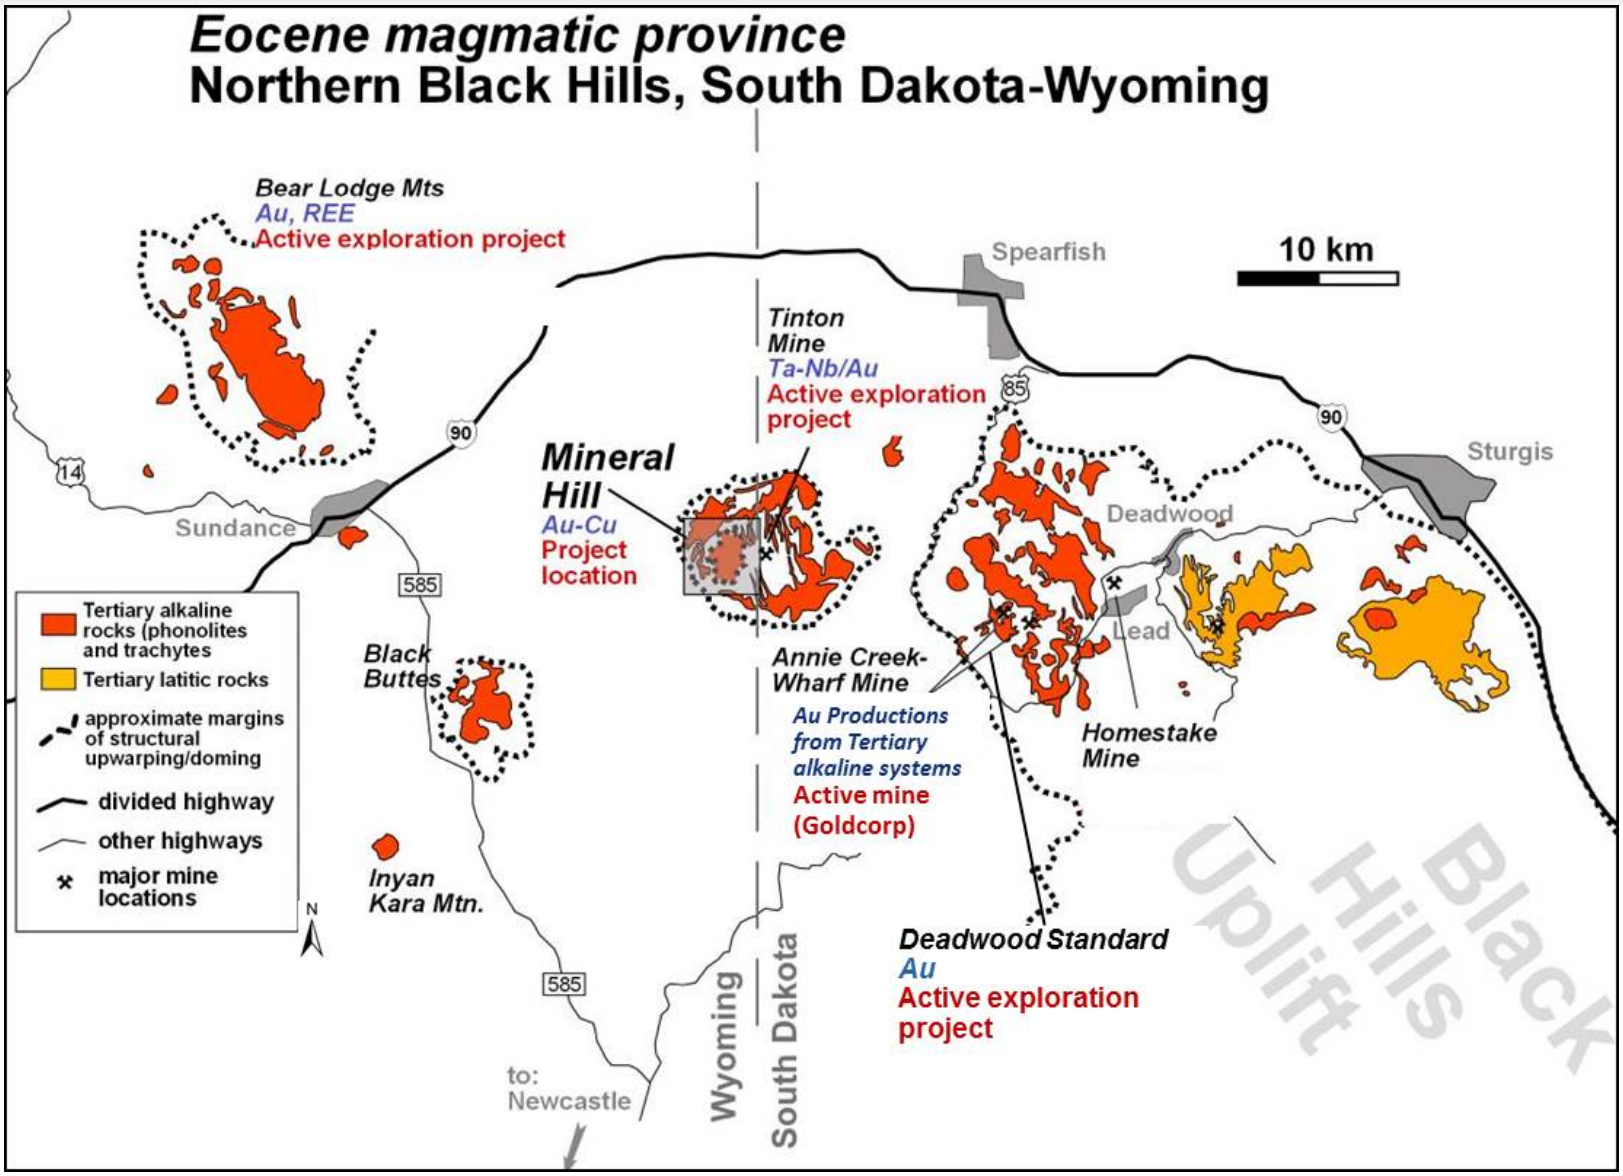

2015 and beyond, regional exploration program:

- Evaluate all opportunities in northern Black Hills – currently underway
- Study projects in both PreCambrian and Tertiary targets
- Based on reviews in 2015, make recommendations for regional program in 2016, with first new target drilling 2017

The Path Forward at Wharf

- Maximize mining and processing rates
- Maintain operating consistency and cost profile
- Minimize sustaining capital expenditures
- Pursue exploration to increase mine life
- Maintain proactive, successful community and governmental initiatives

- ✓ Expected high-return use of capital
- ✓ Maximize net cash flow
- ✓ Preserve presence in favorable, low-risk jurisdiction

Coeur's Inferred Mineral Resources

Year-end 2014	Location	Short tons	Grade (oz/ton)		Ounces (contained)	
			Silver	Gold	Silver	Gold
Inferred Resources						
Rochester	Nevada, USA	96,039,000	0.42	0.003	40,789,000	263,000
Martha	Argentina	204,000	4.75	0.005	969,000	1,000
San Bartolomé	Bolivia	66,000	1.68	-	111,000	-
Kensington	Alaska, USA	1,622,000	-	0.351	-	570,000
Endeavor	Australia	661,000	3.18	-	2,103,000	-
Palmarejo	Mexico	3,040,000	4.98	0.105	15,131,000	318,000
Joaquin	Argentina	720,000	3.99	0.003	2,873,000	2,000
Lejano	Argentina	702,000	2.81	0.010	1,972,000	7,000
La Preciosa	Mexico	1,344,000	1.98	0.004	2,657,000	5,000
Total Inferred Resources		**104,398,000**	**0.64**	**0.011**	**66,605,000**	**1,166,000**

Notes to the above mineral reserves and resources:

1. Effective December 31, 2014 except the Independencia deposit at Palmarejo, effective April 23, 2015, and Endeavor, effective June 30, 2014. Guadalupe reserves and resources adjusted April 23, 2015.
2. Assumed metal prices for estimated Mineral Reserves were $19.00 per ounce of silver and $1,275 per ounce of gold, except Endeavor at $2,200 per metric ton of lead, $2,400 per metric ton of zinc and $20 per ounce of silver.
3. Assumed metal prices for estimated Mineral Resources were $22.00 per ounce of silver and $1,350 per ounce of gold except Endeavor at $2,200 per metric ton of lead, $2,400 per metric ton of zinc and $20 per ounce of silver.
4. Mineral Resources are in addition to Mineral Reserves and do not have not demonstrated economic viability. Mineral Resources do not include Mineral Reserves. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized. The preliminary economic assessment for the re-scoped mine plan at Kensington is preliminary in nature and includes inferred mineral resources, and does not have as high a level of certainty as a plan that was based solely on proven and probable reserves and there is no certainty that the results from the preliminary economic assessment will be realized.
5. Palmarejo Mineral Reserves and Resources are the addition of Palmarejo, Guadalupe, and Independencia deposits. There are no Mineral Reserves and Resources for La Patria in 2014.
6. Rounding of short tons and troy ounces, as required by reporting guidelines may result in apparent differences between tons, grade, and contained metal content.
7. For details on the estimation of Mineral Resources and Reserves for each property, Canadian investors should refer to the NI 43-101 compliant Technical Report on file at www.sedar.com and the Technical Report for Palmarejo to be filed on www.sedar.com during the second quarter of 2015.

Wharf's Historical Mineral Reserves and Resources

	Tons (000s)	Grade (oz/t)		Ounces (000s)	
		Gold	Silver	Gold	Silver

Probable Reserves	8,245	0.026	0.108	220	890
Total Proven and Probable Reserves	**23,424**	**0.024**	**0.089**	**560**	**2,080**
Measured and Indicated Resources					
Measured Resources	4,795	0.020	0.104	100	500
Indicated Resources	1,642	0.020	0.102	30	170
Total Measured and Indicated Resources	**6,437**	**0.020**	**0.104**	**130**	**670**

Notes to the above mineral reserves and resources:

1. Mineral Reserves and Mineral Resources estimate as reported by Goldcorp in its Annual Information Form dated March 31, 2014 ("AIF") for the financial year ended December 31, 2013, available to Canadian investors at www.sedar.com under Goldcorp's profile. As discussed in the AIF, Mineral Reserves and Mineral Resources were prepared by Goldcorp in accordance with NI 43-101 under the supervision of a qualified person. Coeur is not treating these historical estimates as current and has not completed sufficient work to classify the historical estimate as current mineral reserves or mineral resources for Coeur's purposes. Coeur's qualified person will review and verify the scientific and technical information of Goldcorp, as well as complete the other work necessary for purposes of preparing a 43-101 technical report, including validation of data quality, resource model accuracy, and costs used in reserve and resource cutoffs.
2. As discussed in the AIF, mineral reserves were calculated by Goldcorp using metal prices of $1,300 per gold ounce and $22 per silver ounce, and mineral resources were calculated using $1,500 per gold ounce and $24 per silver ounce. Mineral resources are in addition to mineral reserves and do not have demonstrated economic viability. Rounding of tons, as required by reporting guidelines, may result in apparent differences between tons and grade.
