Cautionary Statements

This presentation contains forward-looking statements within the meaning of securities legislation in the United States and Canada, including statements regarding anticipated repositioning, cash flow, returns, production, costs, grades, margins, the development of the Jualin deposit, the anticipated benefits of the Wharf and Paramount acquisitions, capital expenditures, Guadalupe and Independencia mining rates, expansion projects and POA 10 approval at Rochester, development of the Independencia deposit at Palmarejo, open-pit and underground mining operations at Palmarejo and exploration efforts. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause Coeur's actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors include, among others, the risk that some or all of the anticipated benefits of the Wharf and Paramount acquisitions will not be realized, the risks and hazards inherent in the mining business (including risks inherent in developing large-scale mining projects, environmental hazards, industrial accidents, weather or geologically related conditions), changes in the market prices of gold and silver and a sustained lower price environment, the uncertainties inherent in Coeur's production, exploratory and developmental activities, including risks relating to permitting and regulatory delays, ground conditions, grade variability, any future labor disputes or work stoppages, the uncertainties inherent in the estimation of gold and silver ore reserves, changes that could result from Coeur's future acquisition of new mining properties or businesses, reliance on third parties to operate certain mines where Coeur owns silver production and reserves and the absence of control over mining operations in which Coeur or its subsidiaries hold royalty or streaming interests and risks related to these mining operations including results of mining and exploration activities, environmental, economic and political risks of the jurisdiction in which the mining operations are located, the loss of any third-party smelter to which Coeur markets silver and gold, the effects of environmental and other governmental regulations, the risks inherent in the ownership or operation of or investment in mining properties or businesses in foreign countries, Coeur's ability to raise additional financing necessary to conduct its business, make payments or refinance its debt, as well as other uncertainties and risk factors set out in filings made from time to time with the United States Securities and Exchange Commission, and the Canadian securities regulators, including, without limitation, Coeur's most recent reports on Form 10-K and Form 10-Q. Actual results, developments and timetables could vary significantly from the estimates presented. Readers are cautioned not to put undue reliance on forward-looking statements. Coeur disclaims any intent or obligation to update publicly such forward-looking statements, whether as a result of new information, future events or otherwise. Additionally, Coeur undertakes no obligation to comment on analyses, expectations or statements made by third parties in respect of Coeur, its financial or operating results or its securities.

Dana Willis, Coeur's Director, Resource Geology and a qualified person under Canadian National Instrument 43-101, supervised the preparation of the scientific and technical information concerning Coeur's mineral projects in this presentation. Mineral resources are in addition to mineral reserves and do not have demonstrated economic viability. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized. For a description of the key assumptions, parameters and methods used to estimate mineral reserves and resources, as well as data verification procedures and a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, Canadian investors should see the Technical Reports for each of Coeur's properties as filed on SEDAR at www.sedar.com.

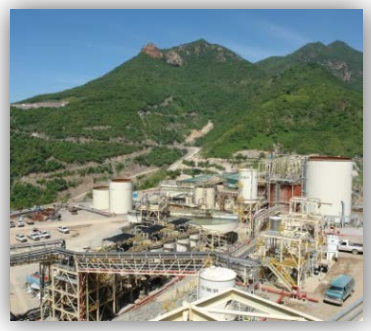

Cautionary Note to U.S. Investors - The United States Securities and Exchange Commission permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We may use certain terms in public disclosures, such as "measured," "indicated," "inferred" and "resources," that are recognized by Canadian regulations, but that SEC guidelines generally prohibit U.S. registered companies from including in their filings with the SEC. U.S. investors are urged to consider closely the disclosure in our Form 10-K which may be secured from us, or from the SEC's website at http://www.sec.gov.

Non-U.S. GAAP Measures - We supplement the reporting of our financial information determined under United States generally accepted accounting principles (U.S. GAAP) with certain non-U.S. GAAP financial measures, including adjusted EBITDA, adjusted costs applicable to sales per silver equivalent ounce, and adjusted all-in sustaining costs. We believe that these adjusted measures provide meaningful information to assist management, investors and analysts in understanding our financial results and assessing our prospects for future performance. We believe these adjusted financial measures are important indicators of our recurring operations because they exclude items that may not be indicative of, or are unrelated to our core operating results, and provide a better baseline for analyzing trends in our underlying businesses. We believe adjusted EBITDA, adjusted costs applicable to sales per silver equivalent ounce, and adjusted all-in sustaining costs are important measures in assessing the Company's overall financial performance. Gold and silver equivalence assumes silver to gold ratio of 60:1.

Investment Considerations

- Diversified portfolio of silver and gold assets
- Well-advanced repositioning which may not be fully appreciated in the market
- Executing strategy to reduce costs, improve returns, and drive significant future free cash flow

Silver and Gold Fundamentals

Gold: Fundamentals Remain Intact

Gold remains a store of value and an important component to any diverse portfolio

- Jewelry represents nearly 60% of global demand – the majority from China and India
- Dramatic reduction in ETF holdings over the past two years
- Central Bank purchases remain robust
- Mine production expected to decline due to lack of reinvestment
- Reasons to hold gold:
  - Emerging middle classes in Asia and India
  - Global debt levels relative to GDP
  - Rising obligations from social programs
  - Ongoing currency debasement
  - Geopolitical instability
  - Growing perceived risk in global financial system

Despite high correlation with gold, nearly 60% of total demand from industrial applications

- Mine production set to decline meaningfully
- Scrap supply at twenty year low
- ETF holdings remain strong
- Expanding and diverse demand in electronics, solar panels, water purification, medical applications, automobiles, and batteries

2. Assumed metal prices for estimated Mineral Reserves were $19.00 per ounce of silver and $1,275 per ounce of gold, except Endeavor, at $2,200 per metric ton of lead, $2,400 per metric ton of zinc, and $20.00 per ounce of silver. Assumed metal prices for mineral resources were $22.00 per ounce of silver and $1,350 per ounce of gold, except for Endeavor, at $2,200 per metric ton of lead, $2,400 per metric ton of zinc and $20.00 per ounce of silver.
3. Mineral Resources are in addition to Mineral Reserves and do not have not demonstrated economic viability. Mineral Resources do not include Mineral Reserves. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized. The preliminary economic assessment for the re-scoped mine plan at Kensington is preliminary in nature and includes inferred mineral resources, and does not have as high a level of certainty as a plan that was based solely on proven and probable reserves and there is no certainty that the results from the preliminary economic assessment will be realized.
4. Palmarejo Mineral Reserves and Resources are the addition of Palmarejo, Guadalupe, and Independencia deposits. There are no Mineral Reserves and Resources for La Patria in 2014.
5. Rounding of short tons and troy ounces, as required by reporting guidelines may result in apparent differences between tons, grade, and contained metal content.
6. For details on the estimation of Mineral Resources and Reserves for each property, including the key assumptions, parameters and methods used to estimate the mineral resources and reserves, Canadian investors should refer to the NI 43-101-compliant Technical Report for Coeur's properties on file at www.sedar.com.
