

## Maryland Chooses Tyler Technologies' Odyssey® Integrated Court Management System for Statewide Implementation

*Odyssey's modern system supports Maryland goal of full electronic document management, e-Filing*

**DALLAS – Nov. 3, 2011** – Tyler Technologies, Inc. (NYSE: TYL) today announced that the State of Maryland has selected Tyler's Odyssey® court management system as the single, integrated environment for managing and reporting court information. Odyssey will help the state achieve Maryland Electronic Court (MDEC) goals, which include providing efficient and easy access to statewide statistics and other data to help enhance judicial decision-making, eliminating paper files for new cases, and increasing the number and quality of services to justice partners, lawyers and the public.

Maryland sought an integrated court management system to meet both short- and long-term objectives. Its immediate goal was to replace the legacy systems and 22 significant court applications it currently operates, with a single system to enable the efficient and accurate electronic exchange of judicial information. Longer term, the Maryland Judiciary wants to transform the way justice information is processed and shared among all participants, which requires Odyssey's modern tools, methods and standards.

The contract between Tyler and the State of Maryland is valued at approximately \$45 million, which includes software licensing fees, professional services and a multi-year maintenance agreement. The MDEC Project will use several Odyssey modules, including Case Manager, Enterprise Content Management, Financial Management and e-Filing.

Maryland's search for a judicial technology partner was anchored by three strategic goals: 1) enhance public safety by more rapidly sharing high-quality data in support of better decision-making; 2) increase access to the courts by providing an easy-to-use system that's available anywhere, anytime; and 3) support the fair and efficient administration of justice by using a system that improves overall court operations, including better scheduling, reduced delays and better-informed decisions.

The state's selection committee chose Odyssey after a comprehensive and competitive bidding process. The committee chose Tyler for several reasons, including the company's significant and successful track record of statewide Odyssey implementations.

Tyler has successfully deployed Odyssey statewide in Indiana, Minnesota, New Hampshire, New Mexico, North Dakota and South Dakota. In May 2011, the State of Oregon selected Odyssey for statewide implementation valued at approximately \$31 million. In addition to statewide clients, Odyssey serves counties in eight other states. Including Maryland, Odyssey will serve more than 500 counties with a combined population of over 50 million.

"Tyler is proud that Maryland chose Odyssey as the cohesive system that will allow its courts to electronically manage cases from initiation through disposition, and to quickly share comprehensive court data to help the judiciary make the best decisions possible," said John S. Marr Jr., Tyler's president and chief executive officer. "We believe that Odyssey is the best and most innovative platform available for the Maryland Electronic Court both now and into the future. We look forward to working with Maryland to deliver judicial efficiencies that will benefit the state and its residents."

Maryland will begin its Odyssey rollout by implementing the solution in Anne Arundel County, which is home to the state's capital, Annapolis, and about 500,000 residents. Once implemented, courts in all 24 Maryland counties will have access to the same database, and Odyssey will enable inter-jurisdictional notifications and data transfer between all four levels of court for all case types.

### **About Tyler Technologies, Inc.**

Based in Dallas, Tyler Technologies is a leading provider of end-to-end information management solutions and services for local governments. Tyler partners with clients to empower the public sector — cities, counties, schools and other government entities — to become more efficient, more accessible and more responsive to the needs of citizens. Tyler's client base includes more than 10,000 local government offices throughout all 50 states, Canada, the Caribbean and the United Kingdom. *Forbes* has named Tyler one of "America's Best Small Companies" four times in the last five years. More information about Tyler Technologies can be found at [www.tylertech.com](http://www.tylertech.com).
