

Tyler Technologies Announces New Product for Managing Time & Attendance Tracking

Tyler eTimekeeper frees employees from a physical time clock

DALLAS –July 18, 2013 –Tyler Technologies, Inc. (NYSE: TYL) today announced the general availability of its Tyler eTimekeeper solution, an application used via a Web browser, and within mobile devices, that allows public sector employees to access time and attendance tracking remotely.

Tyler eTimekeeper provides employees and supervisors an efficient and accurate method of tracking hours worked without the burden of using a physical time clock. Supervisors can access various management functions from the eTimekeeper dashboard to facilitate personnel management, configuration and data reporting. A simple clock in/clock out format is easy to use, and employees may create an honor punch (a retroactive punch with a valid reason), view history and comments, and receive notifications via the Web.

Employees can also select jobs from a drop down list, such as when a bus driver needs to distinguish between time spent transporting students to and from school versus transporting them on field trips. Security is assured because eTimekeeper is accessed via a safe and secure login that requires a discrete user name and password for each employee.
