

Municipality Streamlines Public Maintenance Operations with New EnerGov Solution from Tyler Technologies

EnerGov's public maintenance management suite improves processes for city government

PLANO, Texas – April 9, 2015 – Tyler Technologies, Inc. (NYSE: TYL) is now offering an enhanced product suite for its EnerGov™ [planning, regulatory and maintenance](#) solution to help local governments streamline public maintenance management operations.

EnerGov's newly designed public maintenance management suite offers modules for asset management, work order and maintenance management, request management, inspections and investigations, and inventory management. It can configure automated tasks, spatially map assets and affiliate them to a designated source, and track information to assure assets and costs are accurate.

The city of Deer Park, Texas, is using EnerGov's expanded public maintenance management suite to better manage the assets it uses to serve the city's more than 33,000 residents.

“We saw an EnerGov public maintenance management suite demo at Tyler's annual client user conference and we immediately thought it was a great fit for us,” said Deer Park's Director of Information Technology Linda McHone. “Since implementing the solution, EnerGov's mobile functionality has allowed us to complete work in the field without the delay of having to submit work orders. Our staff can process work much quicker, ultimately making us more efficient.”

Tyler worked with clients to broaden the EnerGov public maintenance management suite, ensuring that it tightly fit their needs.

“We worked closely with our clients to ensure we were building software functionality that works the way they do,” said Brett Cate, president of Tyler's Local Government Division. “EnerGov's technical merits attract public sector agencies of all sizes, and our clients also know they are getting a true long-term partner, not just a software provider. We're excited to offer our expanded EnerGov public maintenance management suite to help our clients achieve more efficiency and success.”
