

Tyler Technologies Hosts 3,000 Public Sector Clients at Largest-Ever Conference

User conference emphasizes continuous improvement and the future of connectivity

PLANO, Texas – May 27, 2016 – Tyler Technologies, Inc. (NYSE:TYL) welcomed more than 3,000 public sector leaders to its largest-ever client conference earlier this month, where Tyler clients learned about product functionality, exchanged ideas with peers and viewed highlights of future software developments.

Connect, the company’s annual educational gathering for users, was held this year in Phoenix, and hosted more than 3,000 public sector clients from 49 states and two Canadian provinces. Overall, attendees represented 1,354 unique cities, counties, courts and other jurisdictions of all sizes, reflecting not only Tyler’s broad customer base, but the public sector market as a whole.

“The annual Connect event is a significant part of our relationship with clients, and it’s the ideal platform for clients to grow in their understanding and full utilization of their Tyler products,” said John S. Marr Jr., Tyler’s president and CEO. “Connect allows us to underscore Tyler’s commitment to continued, sustainable investments in technology to ensure our clients have current solutions to meet their needs. Whether it means deepening the integration of our products or hiring another 140 software developers like we will this year, our goal is continuous improvement for ourselves and for every essential area of the public sector.”

In addition to an opening address from Marr, attendees to the event’s opening keynote speech were treated to a presentation from renowned technology futurist Thomas Koulopoulos, founder of the Delphi Group, who for 25 years has been providing thought leadership to global organizations on the intersection of business and technology. Koulopoulos was named one of the industry’s most influential information management consultants by InformationWeek magazine, and, as a recognized author on the subject, he frequently appears in national and international print and broadcast media.

During his presentation at Connect, Koulopoulos explained how technology has created “hyper-connected behavior” that results in the “digital-citizen” placing new demands on the public sector. Koulopoulos stressed that technology is no longer just a tool, but rather the fiber of how people interact, including with their governments, and that citizens will increasingly expect personalized technology from the public sector. He noted that collaboration between partners like Tyler and its public sector clients will ultimately build digital ecosystems with integrated technology that will help governments meet citizen needs in better, more efficient and innovative ways.

The keynote presentations were followed by three days of more than 700 training sessions across multiple educational tracks. Sessions included presentations and discussions on industry topics, such as Affordable Care Act reporting, transparency, public access, cloud solutions, and mobile applications. Product tracks included classes for CLT Appraisal Services™, Eagle™, Eden™, EnerGov™, iasWorld®, Incode®, Infinite Visions®, Munis®, Odyssey®, Orion™, Tyler Public Safety™, Tyler SIS™, student transportation solutions and other Tyler products.

Connect 2017 is scheduled for May 7-10, 2017, in San Antonio, Texas.
