

Tyler Technologies Announces Winners of the 2016 Tyler Public Sector Excellence Awards for School Solutions

School districts utilize Tyler solutions to better access student data and manage transportation

PLANO, Texas – June 7, 2016 – Tyler Technologies, Inc. (NYSE: TYL) today announced recipients of its 2016 Tyler Public Sector Excellence Awards for the Tyler SIS™ and Versatrans® solutions for schools.

River East Transcona School District in Winnipeg, Manitoba, and Magnolia Independent School District in Texas received awards for their innovative uses of Tyler solutions.

Tyler's Excellence Awards recognize organizations that deploy Tyler software in novel and impactful ways that can establish new best practices for other jurisdictions.

Award submissions were evaluated by a panel of Tyler leadership, and entries were judged on business value, maturity, innovation and relevance to other public sector organizations. Additional criteria met by award winners include:

- Creating a unique process that utilizes a Tyler application
- Realizing significant savings and efficiencies after implementing a Tyler product
- Increasing staff productivity by implementing a Tyler product
- Empowering employees, citizens or vendors

The River East Transcona School District implemented Tyler SIS in 2012 to replace a legacy system which only collected some data digitally, leaving the rest to paper records. In the three years since implementation, the district has also added the Tyler Pulse™ data analytics system and the Versatrans transportation management solution to their technology stack, integrating them with Tyler SIS. Through integration of these products, district staff can now access all pertinent student data digitally and know that the data is consistent across systems. This has lowered paper costs, and reduced time spent on software training and on double entry by district staff.

The Magnolia Independent School District successfully used Tyler's student transportation software to meet the challenge of shrinking budgets, rising fuel prices and a growing student population. The district implemented Versatrans in 2008, replacing a less efficient, paper-based routing system. At that time, the transportation department was tasked with cutting its budget by 10 percent, despite record-high fuel prices. Through route optimization with Versatrans Routing & Planning™, the district met that budget goal and, although the district population has increased 30 percent since 2007, the department has managed to lower operating costs by more than \$1 million. The district now uses several applications from the Versatrans transportation
