

USDA Forest Service Modernizes Criminal Justice Information System and Attains New Compliance Standards with Tyler Technologies and V3Gate

Entellitrak allows law enforcement officers to easily create reports, issue violations, and manage data

PLANO, Texas - [Tyler Technologies, Inc.](#) (NYSE: TYL) announced that through [Tyler's Platform Alliance](#) Silver level partner V3Gate, the United States Department of Agriculture (USDA)'s Forest Service Law Enforcement and Investigations (LEI) has gone live on the Entellitrak® case management solution to replace its Law Enforcement Investigation Management Attainment Reporting System (LEIMARS). An Entellitrak-based Criminal Justice Information System (CJIS) provides the USDA with end-to-end case management on a single platform.

In replacing its legacy LEIMARS system with LEIRS (Law Enforcement Investigation Reporting System), the LEI is now both Federal Risk and Authorization Management Program (FedRAMP) and National Incident Based Reporting System (NIBRS) compliant. LEIRS enables reporting of law enforcement activities and information including incident reporting, investigations and violation notices through NIBRS. This implementation represents the second Entellitrak-based CJIS that has been configured and deployed to meet congressionally-mandated NIBRS compliance.

"The USDA Forest Service LEI needed a more robust and modernized system with security and configurability to support its growing law enforcement mission," said Jill Ryan, director, Program Management Office for V3Gate. "Tyler and V3Gate were able to meet those needs while also providing USDA Forest Service law enforcement officers with tools to make doing their jobs easier. With this modernized solution, USDA Forest Service can now join a short list of federal agencies that have met the NIBRS mandate in 2021."

With this connectivity, law enforcement officers are now able to issue violation notices and create incident reports from anywhere and then upload and manage those documents easily when able to connect online. With Entellitrak, the USDA Forest Service LEI also has access to advanced capabilities including:

- Filing records, checking the status of queries and claims, and easily submitting documents online allowing for better engagement of external audiences and lower workload of internal staff
- A customizable help module which delivers greater access to vital information and instructions to end users
- Designing, generating and formatting reports through a user-friendly interface, providing better access to data

"This full solution allows Forest Service LEI to rapidly modernize management of law enforcement activities, with the potential to fully modernize the business side of law enforcement including timekeeping and activity reporting, training management, and asset management," said Skip Bland, business development executive, Tyler Technologies. "We're excited to continue our work with the USDA Forest Service and demonstrate Tyler's ability to deliver robust federal and public sector law enforcement solutions."

About Tyler Technologies, Inc.

Tyler Technologies (NYSE: TYL) provides integrated software and technology services to the public sector. Tyler's end-to-end solutions empower local, state, and federal government entities to operate more efficiently and connect more transparently with their constituents and with each other. By connecting data and processes across disparate systems, Tyler's solutions are transforming how clients gain actionable insights that solve problems in their communities.
