Ferguson receives 2024 Best Sustainability Innovation Solution Award from CBRE

2025-01-29

At Ferguson, we're passionate about building water-resilient communities and working alongside industry partners to help solve our nation's water challenges. Recently, we participated in a sustainable solutions competition hosted by CBRE, one of the largest commercial building management companies in the country. Our mission? To implement innovative, sustainable solutions across CBRE's extensive real estate portfolio.

Teaming up with Symmons, we introduced the Symmons Evolution system—a game-changing, easily-installed building management solution. This system features sensors for flow, smart utilities, leak detection and temperature monitoring, providing real-time updates and a comprehensive overview of water usage and potential issues before they occur.

The solution has been a resounding success, attracting interest from eight additional CBRE clients. As a result, Ferguson was honored with the 2024 Best Sustainability Innovation Solution Award by CBRE.

"This award from CBRE is a testament to our company's commitment to providing world-class customer service and the best-in-class associates who make it all possible, said John Morris, Director of Business Development at Ferguson, whose team led the engagement with Symmons and CBRE "Water is our business, and our partnership

with Symmons and CBRE demonstrates how our value-added solutions can save money for our customers through water conservation while also saving hundreds of millions of gallons of water."

This recognition highlights Ferguson's partnership and our shared mission to provide and protect water. By working together, we are making a significant difference in water management and conservation, ensuring a sustainable water future for all.
