#### DOXIMITY, INC.

# **Environmental Policy**

## I. Environmental Footprint

Doximity is committed to being a responsible steward of the environment by monitoring our environmental impact and fully complying with all relevant laws and regulations. Our environmental footprint today is relatively small. Our products are offered through a cloud-based platform and do not require proprietary hardware.

Additionally, we continue to lower our environmental footprint as the majority of our employees work primarily from home, reducing the footprint of our office space and commute-related emissions.

## II. Supporting a Digital-First Health Care Delivery Model

Our telemedicine platform also contributes to the reduction in GHG emissions by enabling our members and their patients to transition to a digital-first healthcare delivery model. We estimate that approximately 3,000 to 3,500 metric tons of carbon dioxide equivalent emissions are avoided for every million virtual visits that would have otherwise been made by car travel. To put this in perspective, 3,000 metric tons of carbon dioxide equivalent represents the emissions of ~650 gasoline powered vehicles driven for a year or the electricity consumption of ~580 homes for a year. Doximity Dialer facilitated tens of millions of telehealth visits in fiscal 2022.

#### III. Emissions

We engaged a third-party vendor to calculate our GHG emissions and found that for the calendar years 2019, 2020, and 2021, our combined Scope 1 and Scope 2 location-based GHG emissions were 273, 252, and 246 metric tons of carbon dioxide equivalent, respectively, while our market-based emissions were 289, 266, and 258, respectively. Over this time we nearly tripled our revenue, demonstrating that we can scale responsibly.

## IV. Sustainable Growth

As we grow, we will continue to assess our environmental impact and search for innovative ways to build a more sustainable business and world.

<sup>&</sup>lt;sup>1</sup> This estimation is based on research conducted by <u>Connor et al</u> and <u>Miah et al</u>. For further evidence of emission reductions from telehealth (across transportation modes), see <u>Purohit et al</u>

#### V. Our Commitment

Doximity is committed to creating environmental awareness across our organization and managing our business activities and relationships sustainably.

- We will report, when appropriate, on our relevant activities and continue to address environmental issues in ways that strengthen our mission and purpose.
- We provide training and awareness programs to our employees to highlight best practices and ensure company environmental priorities are understood and actionable.
- We incorporate environmental issues into our strategic analysis and decision-making processes, as appropriate.
- We continue to monitor the impact of our business on the environment by tracking carbon emissions.
- We will continue to monitor our energy consumption within our offices and maintain our goal of scaling responsibly.

Doximity is also committed to using natural resources and energy efficiently. We engage a third-party vendor to calculate our Scope 1 and Scope 2 GHG emissions and will continue to inform stakeholders on these data collection efforts through our ESG website.

Our commitment, with the support and effort of our team members, will continue to drive innovative ways that minimize our impact on the environment.

## VI. Environmental Oversight

Consistent with our other ESG efforts, the Board of Directors of Doximity, Inc. (the "Board") considers environmental oversight to be part of its overall responsibility.
